

SuperSTOPPER® Maxi

The SuperSTOPPER® Maxi's is a system designed to prevent the spread of fire through service penetrations, in the smallest footprint possible. The SuperSTOPPER® has been tested rigorously with a range of mixed service types and bundles in common wall and floor types and is one of the most fire tested products in the world, with industry leading FRL's of up to -/240/240 (system specific).

KEY FEATURES

- Allows multiple and mixed services to pass through one opening
- Mixed services approved in any quantity or configuration
- Retro-fit or new construction
- Space saving, eliminates the need for 200mm separation between adjacent services
- Tested in Hebel®, single/ double layer plasterboard, Speedpanel® and many other common wall/floor systems
- Fire tested in independent laboratories
- Thoroughly tested to AS1530.4-2014
- No need to frame/line plasterboard wall penetrations

APPLICATIONS

Electricians	Power
	Data cables Conduits
Plumbers	Steel and Copper pipes
	PVC pipes
	PEX pipes PEX-AL-PEX pipes
HVAC&R	Insulated pipes
Active Fire	Sprinkler pipes
	Fire cables

SuperSTOPPER® Maxi and Mini

WHAT IS SuperSTOPPER® MAXI/MINI?

Trafalgar Fire's SuperSTOPPER® Maxi & Mini are an intumescent lined product designed to prevent the spread of fire through service penetrations. Think of the SuperSTOPPER® Range as fire rated holes, and as a fire takes hold the intumescent material expands to close off the penetration, forming a tight seal around the services and crushing off plastic pipes. Intumescent foam plugs are also fitted, giving the SuperSTOPPER® superior reliability, smoke leakage and acoustic properties, and the ability to allow for adds, moves and changes.

SuperSTOPPER® Maxi and Mini's are fire tested for multiple and mixed service types, which remove the need to separate service penetrations such that all contractors can run their services through the one penetration.

The SuperSTOPPER® Maxi and Mini systems come in various sizes to suit most applications and can be used in conjunction with Trafalgar Fire's FyreBOARD Maxilite® bulkhead and penetration systems.

APPLICATIONS

SuperSTOPPER® Maxi and Mini systems are suitable for use in any building where penetrations are made through fire rated plasterboard, Speedpanel®, Hebel®, Walsc®, Pronto Panel, FyreBOARD Maxilite®, masonry/concrete walls and concrete floors. They have been tested and approved for the following services:

- Electrical (copper and aluminium) cables and cable trays
- Data and communication cables
- Steel and copper pipes
- Pair coil and CHW pipes (copper and PEX)
- Heat trace cables
- CPVC sprinkler pipes
- Small conduits
- PVC pipes (floors only)
- PEX and Gas PEX-AL-PEX

FyreFLANGE FOR SuperSTOPPER® Maxi and Mini

WHAT IS FYREFLANGE?

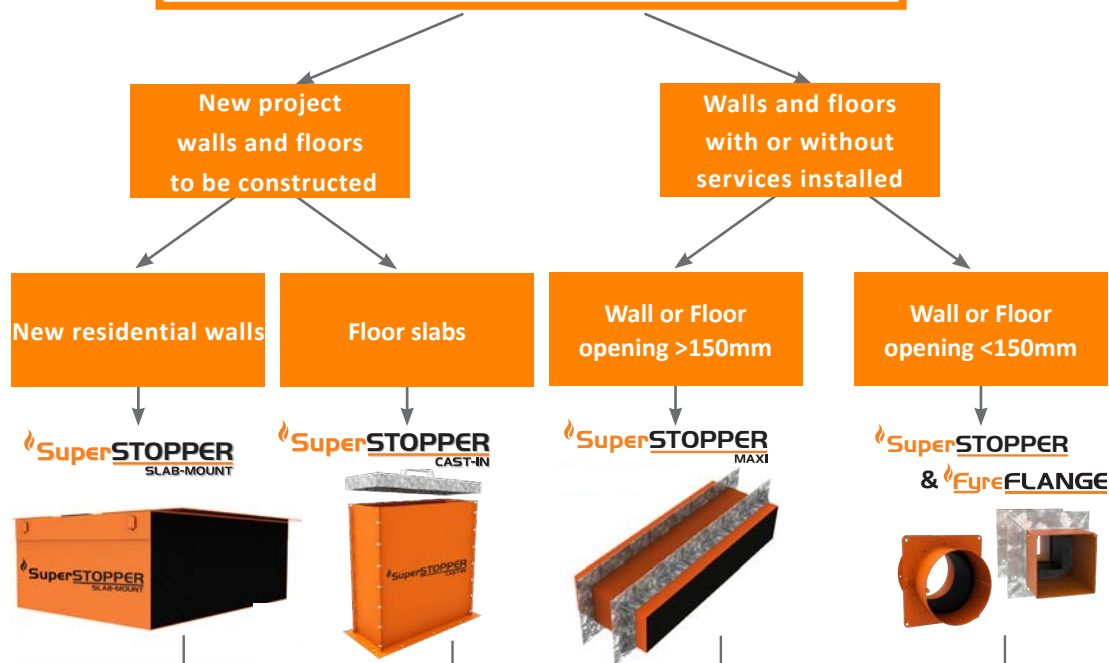

Every SuperSTOPPER® Maxi or Mini system is now supplied with the updated FyreFLANGE for easy mounting to cover larger core holes and openings. The latest testing allows for annular gaps up to 20mm around the SuperSTOPPER® when using the FyreFLANGE mounting brackets, making the SuperSTOPPER® Mini or Maxi a great choice for a bigger range of penetrations.

Where larger annular gaps occur on site contact Trafalgar Fire for even larger custom mounting flange systems, or use FyreBOARD Maxilite®.

Product	Depth mm	Height mm	Width mm	FyreFLANGE Dimensions

For full FRL details please consult the relevant technical guide or contact Trafalgar Fire. Fire testing of Trafalgar Fire products is always ongoing.

FIRE RESISTANCE LEVEL

FIRE RATING – HOW IS FIRE PERFORMANCE

An FRL (fire resistance level) is a handy way of summarising the performance of a building element. It consists of 3 numbers, all given in minutes:

FRL 120/120/120

(example)

Structural Adequacy

The ability of the building element to support the weight of adjacent building elements.

ie: a brick wall supporting a concrete floor slab above.

Integrity

The ability of an element to prevent the passage of flames and hot gasses.

ie: a plasterboard wall remaining intact and not allowing holes to form.

Insulation

The ability of an element to resist heat transfer from the exposed face to the unexposed face.

ie: a bundle of cables remaining below a set temperature limit on the unexposed side of the wall penetration system.

Penetrations are not required to have a Structural Adequacy rating and is usually expressed as a dash. For example, a penetration through a 2-hour load bearing wall would be written as -/120/120.

INTEGRITY

The SuperSTOPPER® Maxi or Mini system will achieve the integrity performance for up to 2 hours physically stopping the direct spread of fire, however the insulation performance of the penetration will be limited to the type of wall being used and conductivity of the services in the penetration.

INSULATION (TEMPERATURE RISE)

Heat transfer via conduction (or heat rise) will occur through the conductive parts of any penetration system. To limit the heat rise through the SuperSTOPPER® Maxi or Mini penetration systems, our 25mm thick TWRAP foil encased blanket can be wrapped around the services and metal casing of the SuperSTOPPER® to achieve up to 2 hours of insulation performance. There are some applications that won't require any TWRAP to achieve the full FRL, please refer to the tables below for specific details.

60 MINUTE PLASTERBOARD STUD WALLS -WRAP FREE!

Minimum of 13mm fire grade plasterboard on each face of steel or timber stud, of minimum 64mm thickness with a stated FRL of -/60/60

Service Type	Service Specification		FRL - WRAP FREE	
			64mm stud*	92mm studs
Plastic Pipes	PVC Pipes	Up to 32mm OD	-/60/30	-/60/60

Drinks python***	Lagged post mix lines	90mm OD 10x post mix lines with 19mm FR thermal lagging	-/120/120	-/120/120	Wrap Free

[^]Large metal pipes require 2 layers of TWrap. Refer to [page 21](#)

*With or without heat trace cable

**With 300mm of loose TWrap infill (foil removed) packed around the services within the wrap if cable tray is used

***Aluminium cable bundles spaced 50mm apart when installed on cable tray

3-4 HOUR FRL SLABS MINIMUM THICKNESS 175MM

Concrete floors with our without steel decks with an effective minimum thickness of 175mm.

Service Type	Service Specification		FRL – Wrap Free	FRL – With TWrap	TWrap Length (mm)
Metal Pipes	Steel Pipes	Up to 50mm	-/120/-	-/240/120	450
Insulated Metal Pipes	Stainless Steel Pipes	Up to 50mm OD with EPS or PE insulation and rockwool	-/240/60	-/240/240	300
Power Cables	3x Core	Up to 2x 19mm 3C + E per bundle	-/240/60	-/240/120	300
Comms Cables	CAT6	Up to 5x per bundle	-/240/60	-/240/120	300
Power Cables - Aluminium Core	Single core AL cables	Up to 1x 400mm ²	N/a	-/180/180*	300
Drinks python***	Lagged post mix lines	90mm OD 10x post mix lines with 19mm FR thermal lagging	-/240/240	-/240/240	Wrap Free

Where TWRAP is required for increased insulation performance, it is to be installed on top side of the slab.
FyreWrap® Elite 1.5 may be substituted for any of the above TWRAP applications.

THE CHALLENGE WITH 3-4 HOUR FRL'S

After two hours of the AS1530.4 fire test, the temperatures inside the furnace will increase from 1050 to 1200 degree's C which is above the melting points of some metals like copper. Therefore, most copper based building services (cables and copper pipes) are practically very difficult to remain under the insulation (heat rise) criteria past 2 hours.

In this case, please refer to our specific **3-4 hour FRL Applications Manual** for specific advice on how fire engineering can deal with these penetrations as an alternate solution to address the building code's performance requirements.

[Click Here](#)

[Download 3-4 Hour Penetrations Applications Manual](#)

FIRE RATED CEILINGS

The SuperSTOPPER® Maxi and Mini systems are tested and approved for use in various ceilings including Corex board and plasterboard ceilings that meet the requirements listed. Penetrations MUST be lined with 60mm Maxilite board as shown in the installation drawings.

Timber or steel framed ceiling construction

Ceiling facing thickness	FRL	RISF
Minimum thickness 16mm	-/30/30	30mins
Minimum thickness 29mm	-/60/60	60mins
Minimum thickness 32mm	-/90/90	60mins
Minimum thickness 48mm	-/120/120	60mins

The FRL's listed below against service penetrations are limited to the FRL and RISF rating of the ceiling system they are installed into.

Service Type	Service Specification		FRL – Wrap Free	FRL – With TWrap*	TWrap Length (mm)
Plastic Pipes	PEX pipes	up to 32mm OD	-/120/120	-/120/120	300

		up to 100mm OD	-/120/-	-/120/120	600
	Steel pipes	up to 50mm OD	-/120/-	-/120/120	300
		up to 100mm OD	-/120/-	-/120/120	600
Metal Pipes Insulated*	Copper pipes	up to 50mm OD with FR insulation	-/120/120	-/120/120	300
	Stainless Steel pipes	Up to 50mm OD with EPS or PE insulation and rockwool	-/120/120	-/120/120	300
	Pair Coils	Up to 9.5 & 19mm with up to 20mm FR insulation (OR 13mm PE) with 10mm OD cable	-/120/120	-/120/120	300
Power Cables - Aluminium Core***	4x Core AL cables	Up to 4 x 240mm ² + optional 90mm ²	-/90/30	-/90/90	300
	Single core AL cables	Up to 1x 400mm ²	-/90/30	-/90/90	300
Power Cables - Copper Core	TPS cables	Up to 10x per bundle	-/120/120	-/120/120	300
	3x Core cables	19mm diam 3C + E cables	-/120/120	-/120/120	300
	AS1530.4 Appendix D cable sets on cable trays	Applies to all copper core power cables and cable trays up to 1000mm wide	-/120/120	-/120/120	600
Comms Cables	AS1530.4 Appendix D cable sets on cable trays	Copper core comms cables and cable trays up to 1000mm wide	-/120/30	-/120/120	450
	Fibre Optic cables	NBN grade cable	-/120/120	-/120/120	300
	CAT6	Up to 150x per bundle	-/120/120	-/120/120	300
Conduits	uPVC Conduits Rigid or Flexible	Up to 32mm OD (with or without cables)	-/120/120	-/120/120	300

*Wrapped SuperSTOPPER®s achieve the full RISF rating as required by the ceiling system

INSTALLATION

SuperSTOPPER® Mini in Walls

ALL WALLS

CUT HOLE

Cut a hole in the barrier allowing for an appropriate annular gap (5-20mm between the edge of the hole and the walls of the SuperSTOPPER® Mini). Example: for a 100mm SuperSTOPPER® Mini-R, cut a maximum hole 140mm diameter.

Note SuperSTOPPER® Mini's do not require openings to be framed with stud or lined with

INSERT AND SEAL

Insert the SuperSTOPPER® Mini into the hole, and centre it to the wall or floor. NOTE: if barrier is too thick, contact Trafalgar Fire for alternative installations.

Seal the annular gap around the SuperSTOPPER® with FyreFLEX® Sealant to 20mm depth, on both

Please note: The SuperSTOPPER® Mini can be installed before or after the services are in place, the hinged design allows for the box to be retro fit around services, or services can be run once the box is in place.

FLANGES

Install the steel mounting flange to both sides of the wall, or just the top side of a concrete floor. When fitting the orange flanges, use the fixings to suit the wall or floor type as per table 1 on [page 24](#), using 2x fixings per flange.

FOAM

Cut a slit through the SuperSTOPPER® foam plug inserts and notch out holes to suit the services that are installed, then fit the foam in the box around the services. Foam is needed on both sides of a wall, but only the top side of a concrete slab penetration.

The fit should be snug, fill any gaps with intumescent (black) foam off-cuts, or FyreFLEX® Sealant.

[Click to Watch Installation Video](#)

INSTALLATION

SuperSTOPPER® Mini in Walls

ALL WALLS

TWRAP

Where required, wrap the services with the appropriate length of TWRAP (per FRL tables above). The TWRAP should overlap itself around the pipe by 50mm, if two strips are required to meet the appropriate length, then where the second length meets the first, a 50mm overlap is required.

TWRAP is secured to the service using steel cable ties, 50mm from each end and 150mm centres in-between.

LABELLING

Document the penetration. It is general good practice to take photographs and label all completed penetration works to add to the site's documentation for future inspections. AS4072 includes some recommendations and templates for penetration register stickers.

If you need penetration stickers, we offer them at Trafalgar. Click [here](#).

TABLE 1: FIXINGS

SuperSTOPPER® Maxi & Mini

Wall Type	Fixing
Plasterboard walls, Corex and shaft walls	8gx50mm plasterboard screws
AAC panel (Hebel®, Walsc® etc)	
FyreBOARD Maxilite®	
Speedpanel®	8gx50mm metal drilling head screws
Concrete/Masonry and Alpha Panel	M6x50mm masonry anchors
Plasterboard Ceilings	10gx 100mm plasterboard screws, and additional framing (refer to page 30-31)

INSTALLATION

SuperSTOPPER® Maxi in Walls

WALL TYPES

PLASTERBOARD OPENING

Openings in plasterboard walls must be lined with steel stud and plaster to support the SuperSTOPPER® Maxi. This includes Corex walls and the Alpha Panel wall systems that have a stud cavity.

Hebel®/AAC WALLS OPENING

In a Hebel® and Walsc walls, cut the appropriate size hole for the SuperSTOPPER® Maxi. **NOTE:** Larger openings in AAC walls may need additionally steel framing as per CSR Hebel® recommendations. Refer to appendix for more details.

Please note: When cutting a hole in any wall for a SuperSTOPPER®, allow for a 5-20mm gap between the box and the edge of the hole.

Speedpanel® OPENING

Cut the opening in the wall and line with steel u-channel as per Speedpanel® requirements.

NOTE: If Speedpanel® is less than 78mm thick, one face will have to be lined with 60mm FyreBOARD Maxilite® Board for 100mm away from the aperture. Refer to appendix for more details.

CONCRETE/MASONRY OPENING

In a concrete wall, simply cut/form the appropriately sized hole for the SuperSTOPPER® Maxi.

See Table 1: SuperSTOPPER® Maxi& Mini Fixings on the previous page to select the correct fixing for the wall type.

[Click to Watch Installation Video](#)

INSTALLATION

SuperSTOPPER® Maxi in Walls

ALL WALLS

SEALANT

Fill FyreFLEX® sealant to 20mm depth, on both sides of the wall for walls that have stud cavities like plasterboard and Alpha Panel walls.

NOTE: Solid walls like Hebel®, Speedpanel, Corex, and some Alpha Panel walls should be filled to the full depth of the wall panel(s).

FyreFLANGE

Fit the FyreFLANGE mounting flange firmly up against the wall. Fix using every second fixing hole with fixings as per Table 1 on [page 24](#). Flanges to be installed on both sides of the wall.

NOTE: For walls there is no need to screw fix the the FyreFLANGE to the SuperSTOPPER®. The system is friction fit.

FOAM

Cut a slit through the SuperSTOPPER® foam plug inserts and notch out holes to suit the services that are installed.

Fill any gaps with foam off-cuts or FyreFLEX® Sealant.

FINISHING

The foam fit should be snug, such that no daylight can be seen through the SuperSTOPPER® once installed to both sides of the wall.

[Click to Watch Installation Video](#)

INSTALLATION

SuperSTOPPER® Maxi in Walls

ALL WALLS

TWRAP™

Where required, wrap the services with the correct length of TWRAP (as per FRL tables listed in the above pages).

NOTE: Cable trays require loose TWRAP infill material to pack out gaps before wrapping.

TWRAP™ AND LABELLING

The TWRAP should overlap itself around the pipe by 50mm, if two strips are required to meet the appropriate length, then where the second length meets the first, a 50mm overlap is required. TWRAP is secured to the service used steel cable ties, 50mm from each end and 150mm centres in-between.

It is general good practice to take photographs and label all completed penetration works to add to the site's documentation for future inspections. AS4072 includes some recommendations and templates for penetration register stickers.

Please note: TWRAP may be substituted with FyreWrap® Elite (38mm) blanket

TWrap (Standard Details) - Fire Rated Walls

Where the SuperSTOPPER and/or services do not achieve full insulation, TWrap can be applied in order to increase this insulation rating up to -/XXX/120.

[Click to Watch Installation Video](#)

INSTALLATION

SuperSTOPPER® Maxi

FLOORS

CUT HOLE

Cut the appropriately sized hole in the Slab (5-20mm annular gap). SuperSTOPPER® can be unhinged to fit around existing services.

NOTE: Cast-in SuperSTOPPER®'s are also available for new builds, or can be retro fit with FyreSET® Mortar.

INSERT AND SEAL

Fit the SuperSTOPPER® and seal the resulting gaps with FyreFLEX® sealant, 20mm on both sides of the floor.

Please note: When cutting a hole in any floor for a SuperSTOPPER®, allow for a 5-20mm gap between the box and the edge of the hole.

FyreFLANGE

Fit the SuperSTOPPER® Flange firmly to the slab, fixing into the concrete with M6x50mm anchors at 200mm centers.

NOTE: Flange may be installed on the top side only, as long as FyreFLEX® Sealant is applied to the annular gaps on the underside.

FOAM

Cut a slit through the SuperSTOPPER® foam plug inserts and notch out holes to suit the services that are installed, then fit the foam in the box around the services on the top side only.

The fit should be snug, fill and gaps with foam off-cuts or FyreFLEX® Sealant.

INSTALLATION SuperSTOPPER® Maxi

FLOORS

TWRAP™

Where required, wrap the services with the appropriate length of TWRAP (per approvals section) on the top side only. The TWRAP should overlap itself around the pipe by 50mm, if two strips are required to meet the appropriate length, then where the second length meets the first, a 50mm overlap is required. TWRAP is secured to the service used steel cable ties, 50mm from each end and 150mm centres in-between.

LABELLING

Document the penetration. It is general good practice to take photographs and label all completed penetration works to add to the site's documentation for future inspections. AS4072 includes some recommendations and templates for penetration register stickers.

If you need penetration stickers, we offer them at Trafalgar. Click [here](#).

TWrap - Fire Rated Floors

Where the SuperSTOPPER and/or services do not achieve full insulation, TWrap can be applied in order to increase this insulation rating up to -/XXX/120.

INSTALLATION SuperSTOPPER® Maxi

CEILINGS

PREPARE PENETRATION

Cut the appropriately sized hole in the ceiling (5-20mm annular gap). SuperSTOPPER® can be unhinged to fit around existing services.

FIT AND FRAME

Fit the topside FyreFLANGE to hole the SuperSTOPPER® in place. Install 50x50x0.9mm steel angles on both sides of the SuperSTOPPER® with 8gx16mm metal screws at 300mm centres. Fix the steel angles into the ceiling framing to take the weight of the penetration off the plasterboard.

Please note: When cutting a hole in any floor for a SuperSTOPPER®, allow for a 5-20mm gap between the box and the edge of the hole.

THICKEN AND SEAL

Install 60mm thick Maxilite board to the underside of the penetration around the SuperSTOPPER® with 100mm overlaps on all side. Seal the gaps with FyreFLEX sealant and install the lower flange with 10gx100mm screws.

FOAM

Cut a slit through the SuperSTOPPER® foam plug inserts and notch out holes to suit the services that are installed, then fit the foam in the box around the services on the top side only.

The fit should be snug, fill and gaps with foam off-cuts or FyreFLEX® Sealant.

INSTALLATION

SuperSTOPPER® Mini

CEILINGS

CUT HOLE

Cut the appropriately sized hole in the ceiling (5-20mm annular gap). SuperSTOPPER® can be unhinged to fit around existing services.

THICKEN

Install 60mm thick Maxilite board to the top side of the penetration around the SuperSTOPPER® with 100mm overlaps on all sides. Fix in place with 10x100mm screws.

Please note: When cutting a hole in any floor for a SuperSTOPPER®, allow for a 5-20mm gap between the box and the edge of the hole.

FLANGES

Seal the gaps with FyreFLEX sealant and install both the upper and lower flanges, fixing in place with 10x100mm screws.

FOAM

Cut a slit through the SuperSTOPPER® foam plug inserts and notch out holes to suit the services that are installed, then fit the foam in the box around the services on the top side only.

The fit should be snug, fill any gaps with foam off-cuts or FyreFLEX® Sealant.

INSTALLATION OVERSIZED OPENINGS

FyreBOARD Maxilite® PENETRATIONS

FYREBOARD MAXILITE® PENETRATIONS

Where openings in walls/floors are cut oversize, FyreBOARD Maxilite® board can be used to board over the larger opening and is compatible with SuperSTOPPER® Maxi and Mini penetration systems.

Please note: All penetrations using FyreBOARD Maxilite® require at least 60mm thickness of board.

Maxilite Board

INSTALLATION PROBLEM SOLVER

FyreBOARD Maxilite® PENETRATIONS

BULKHEADS

Where it is not possible to treat penetrations directly at the wall/floor penetration, SuperSTOPPER® systems are compatible with FyreBOARD Maxilite® bulkhead systems. Refer to [FyreBOARD Maxilite®](#) technical manuals for more information. For compliance of Maxilite bulkhead systems please refer to report FCO2586.

Please note: All penetrations using FyreBOARD Maxilite® require at least 60mm thickness of board.

SuperSTOPPER® Maxi and Mini

COMPLIANCE WITH THE NATIONAL CONSTRUCTION CODE (NCC)

Formerly known as BCA

Under the NCC requirements, a multiple service transit system for service penetrations should be fire tested in every configuration that it is intended for use in, both completely empty (blank seal), partially full and completely full of services so that the product may be installed with as many or as little services as required on site. It is important to fire test in all the different walls types and with different configurations, quantities and types of services which is a time consuming (and expensive) exercise.

Trafalgar Fire SuperSTOPPER® systems have been fire tested extensively to AS1530.4-2014 and approved in accordance with Section 4 AS4072.1 as required by Schedule 5 of the NCC. This includes over 200 hours of accredited furnace time and 30 plus individual test reports to cover the full range of service and wall configurations that allow us to comfortably stand behind our multiple SYSTEM approvals.

These configurations include but are not limited to:

- Service fill ratio: Empty (blank seal), half full and completely full of services
- Barrier types: Various types of plasterboard, concrete, Blockwork, Hebel®, Walsc®, Speedpanel®, Pronto panel, FyreBOARD Maxilite® board, concrete floors etc
- Services: Bare and insulated metal pipes, cable trays and cable bundles, AL and Cu core cables, PVC pipes & conduits, PEX and PEX-AL-PEX pipes, CPVC pipes etc
- Configurations: Blank seal (empty), full of services, double stacked, side by side etc
- Insulation performance: Tested both wrapped and unwrapped with TWRAP to ensure the system works in both configurations
- Penetration sizes: 150 x 125, 350x125, 550x125, 1100x125
- SuperSTOPPER® Variants: Slab Mount, Slab Mount Bambino, Cast-in, Maxi & Mini (retrofit)

When choosing a multiple service transit penetration system like SuperSTOPPER®, it is important to check that all aspects of your system have been fire tested and are fit for purpose.

Compliance will only be achieved when the installation on site mirrors the tested system.

TEST AND ASSESSMENT REPORTS

The above-mentioned fire testing reports have all been conveniently summarised into **BRANZ assessment report FC10266 (available on www.tfire.com.au)** which neatly tabulates the approved services in a range of fire barriers, for all SuperSTOPPER® variants and applications, and covers only minor variations to the tested systems, thereby providing trouble free certification according to NCC.

Importantly, every aspect of the assessment report are backed up by the fire test data and the individual fire test reports are available on request for certification purposes.

FAQ

Q Is the SuperSTOPPER® Maxi/Mini suitable for my refrigeration lines?

A Yes, the SuperSTOPPER® Maxi/Mini has been tested with both fire resistant (FR) and non-FR insulation and can be filled with as many lines as will reasonably fit in the box.

Q Can I install a SuperSTOPPER® Maxi/Mini after the services have been installed?

A Yes, the SuperSTOPPER® Maxi/Mini has a hinged panel allowing for a retrofit option.

Q My opening is 300 x 600mm. Can I still use a SuperSTOPPER® Maxi/Mini?

A Yes, the opening can be sealed off with Trafalgar Fire's fire rated [FyreBOARD Maxilite®](#) board, and SuperSTOPPER® Maxi/Mini can be mounted in the board. Contact Trafalgar Fire for installation details.

Q My certifier told me I need 2-hour insulation rating on my copper pipe penetrations – does the SuperSTOPPER® Maxi/Mini achieve this?

A TWRAP (or FyreWrap®) will need to be wrapped around the SuperSTOPPER® to achieve an insulation rating. Contact Trafalgar Fire for installation details and refer to our YouTube channel for installation videos (Trafalgar TV).

Q Do I need to separate my pipes and cables inside the SuperSTOPPER®?

A No, the SuperSTOPPER® Range has been fire tested completely full and empty (some trade specific separation may be required).

Q How close together can two SuperSTOPPER® be?

A 100mm apart.

SuperSTOPPER Maxi - Installation Overview

STEP 1

Form opening so that annular gaps between SuperSTOPPER Maxi and wall/floor will be between 5-20mm

STEP 2

Insert SuperSTOPPER Maxi into opening so that it is central to the thickness of the wall/floor. Fill annular gaps with Fyreflex Sealant to a depth of at least 20mm from each side of the barrier.

STEP 3

Fit mounting flanges around SuperSTOPPER, on each side of the wall/floor, clamping SuperSTOPPER in place. Secure using clamping or fixing method as required

STEP 4

Run approved services through the SuperSTOPPER opening. Please note, the SuperSTOPPER Maxi has a hinged lid and is also suitable for retrofitting around existing services

STEP 5

Retrieve foam end plugs and form openings to match the services within the SuperSTOPPER. Cutting a slit through these openings will allow for the plug to be opened and inserted around the existing services

STEP 6

Fit foam end plugs tightly around the services, from each side of the SuperSTOPPER, and plug any gaps with foam off cuts or Fyreflex/Fyrepex Sealant. Continue to 'TWrap' drawings if wrapping will be required for full insulation.

NOTE: This is a generic installation guide. For specific details relative to each barrier type, please refer to the corresponding installation drawing as follows.

Drawing No. : 15	Sheet: 15 of 17	Date: 14/05/2024	Scale: NTS	Based on Report No.:	Checked By: CT	<input type="checkbox"/> STANDARD DRAWING <input type="checkbox"/> PROJECT DRAWING			

Applying TWrap To Stacked SuperSTOPPER's

- TWrap detail required on BOTH sides of wall penetrations, but only top side of floors
- Each section of TWrap secured using 4mm steel cable ties at 200mm centers **OR** three sections of aluminium reinforced tape, applied around the circumference of the TWrap. One piece to be applied at each end of the wrap with another at the midpoint.
- Cable trays require infill material as-tested before wrapping

Stacked Horizontal

Where there are any gaps over 150mm between services, pin TWrap together using 1mm steel ties/wire

Length as per this report

Twrap secured around both SuperSTOPPERs with any joints overlapped longitudinally by at least 50mm, as per the standard details outlined in the "TWrap" drawing

Stacked Vertical

TWrap is to be first applied to the service bundles, penetrating out of each SuperSTOPPER, with any joints overlapped longitudinally by at least 50mm

Finally, TWrap is applied around both SuperSTOPPERs (and the both of the service wraps) with any joints overlapped longitudinally by at least 50mm

Length as per this report

Service wraps installed as per the standard details outlined in the "TWrap" drawing

Final casing wrap

Drawing Name: Stacked - TWrap				Test Standard: AS1530.4	Codes:	Revision:	Date:	No.:	NOTICE:

Applying TWrap to metal pipes above NB50

- Twrap applied around pipes first for large pipes, specific lengths as detailed in this report for pipes greater than NB50.
- Each section of TWrap secured using 4mm wide steel cable ties at 200mm centers **OR** three sections of aluminium reinforced tape, applied around the circumference of the Twrap. One piece to be applied at each end of the wrap with another at the midpoint.
- Secondary wrap applied around casing / all other services (as needed) for standard lengths as per this report

NOTES:

- TWrap is required on both sides of wall penetrations.
- Cable trays require infill material as-tested before wrapping

☐ STANDARD DRAWING
☐ PROJECT DRAWING

SuperSTOPPER Mini (Round or Square) - Installation Overview

STEP 1

Approved wall/floor opening

Form opening so that annular gaps between SuperSTOPPER Mini and wall/floor will not exceed 20mm

Fyreflex Sealant

SuperSTOPPER Mini

Insert SuperSTOPPER Mini into opening so that it is central to the thickness of the wall/floor. Fill annular gaps with Fyreflex Sealant to a depth of at least 20mm from each side of the barrier.

STEP 3

SuperSTOPPER Mounting Flanges

Fixings as required for oversized flanges

Fit mounting flanges (as per 'SuperSTOPPER Mini Mounting Flanges' drawing) around SuperSTOPPER, from each side of the wall/floor, clamping SuperSTOPPER in place. Secure using the clamping method or optional fixings as required

STEP 4

Approved services can be run at any step of the install

Run approved services through the SuperSTOPPER opening. Please note, the SuperSTOPPER Mini has a hinged lid and is also suitable for retrofitting around existing services

STEP 5

Retrieve foam end plugs and form openings to match the services within the SuperSTOPPER. Cutting a slit through these openings will allow for the plug to be opened and inserted around the existing services

STEP 6

Foam end plugs fit snug around services

Fit foam end plugs tightly around the services, from each side of the SuperSTOPPER, and plug any gaps with foam off cuts or Fyreflex/Fyreplex Sealant. Continue to 'TWrap' drawing if wrapping will be required for full insulation.

NOTE: This is a generic installation guide. For specific details relative to each barrier type, please refer to the corresponding installation drawing as follows.
