

Industry Update

› MARCH 2019 ISSUE

WELCOME

Welcome to this month's commentary.

First, thanks to those who have commented on our updated newsletter. The intention was to refresh it and make it a bit more printer friendly. Please bear with us as we fine tune it and iron out a few bugs with this publication.

We welcome the feedback and comments on anything we can improve or add to make the newsletter more useful to our readers. If you have any suggestions, please feel free to email info@fpanz.org 

SIG Chair Updates

I would like to announce changes to the inspectorate special interest group (SIG). Jason Godsmark has completed an extensive term in the chair and is stepping down to enable some change in the group. I would like to extend special thanks to Jason for his time served and his contribution to the association during the past few years.

With Jason stepping down, I am pleased to welcome Tony Carline of Aon who will take up the position and has produced an update for this month's newsletter.

We are also working on a revised plan for the contractors SIG and will be announcing both these changes and the new SIG chair in next month's newsletter.

Protection of the Association's Intellectual Property

Lately, with the increased profile of our organisation, we are seeing more use of our brand and other intellectual property without our consent or approval. We are vigorously acting on breaches of the terms of use for our logos as well as the reproduction of documents for which we hold copyright. Just a reminder, any reproduction or use of the main FPA or FireNZ logo is expressly prohibited without written consent. However, we actively encourage our members to show tier logos. We do have some guidelines on how these logos can be used; they are very easy to comply with and can be found here: <http://www.fireprotection.org.nz/about-us/logos> 

We have also recently found some companies using the FPA logo on websites or business cards or claiming to be members when they are not and never have been members of the association. We feel very strongly that this type of abuse of our brand damages not just our association but also our legitimate financial members. If you are aware of any companies that are not members

Scott Lawson

but are using our logos or reproducing our documents or content, we encourage you to let us know so we can issue them with a cease and desist letter or pursue other legal avenues to protect the FPA brand.

Reform of Vocational Education

I recently attended a meeting for the ministry's consultation with Competenz stakeholders on reform of vocational education. Plenty of industries were represented at this meeting, including ours. It was good

Site Safe Discounts

I want to remind you about the association discount available to you as a member of FPANZ. We have also confirmed our current membership with Site Safe to ensure they apply this discount to the membership subscription that is due soon. If you are a member of Site Safe or are planning to attend any training, be sure

to confirm you are recognised as an FPA member to get your discount. Site Safe offer a number of courses that are designed to promote health and safety in the workplace.

Call for Papers FireNZ 2019

The call for papers is currently open, and we are already fielding some great topics for this year's conference. If you have a topic of interest you would like to hear about, please let us know. Alternatively, if you or someone you know is working on a particularly interesting fire-related topic, then make sure you get a submission in soon. The call for papers will close in the second week of April, so don't wait around. We will then complete the selection process with the FireNZ conference committee and announce the first batch of speakers.

New Members

I would like to welcome Fire Protection Engineers as the newest member of our association.

Until next month ...

Regards, **Scott Lawson**
Chief Executive Officer, FPANZ

Use of FPANZ Logo

Recently we have noticed that some of our FPANZ members (and even non-members) have been incorrectly using our FPA trademarked corporate logo.

This logo is not to be used by any entity without the written permission of the Chief Executive Officer and/or FPANZ Board. The purpose of this logo is to provide a corporate identity for the Association in its general course of business activities.

The FPANZ membership tier status logos shown below are licensed to be used by any financial member of FPANZ who has signed up to the FPANZ Code of Ethical Conduct and is fully compliant with all its requirements.

For a list of logo guidelines please visit our website <http://www.fireprotection.org.nz/about-us/logos>.

If you are using an incorrect logo and would like to request a membership logo for use, please email info@fpanz.org

If you are not an FPANZ member and have not gained written permission to use the FPA logo, then we ask that you remove it from your website, email signature or anywhere else that it is currently being used.

It's amazing what can happen when your team isn't satisfied with "good enough."

Get ready for the DV-5A – our new and improved deluge valve. We streamlined the original DV-5, creating an even simpler design with a lower pressure drop and higher pressure rating up to 300 PSI. Plus, with a reduced footprint and integrated alarm port, installation and maintenance are easier than ever. Learn more at www.tyco-fire.com/DV5A.

HOFFE SIG Update

› Author **Steve Smith** – HOFFE SIG Chair

I trust you are all well and that business is good. This year is racing by, somehow it is approaching the end of March already and there is plenty to do. Any way on a positive note we have managed to get the HOFFE register online so many thanks to the work of the members of the HOFFE group and the team at the FPA involved in achieving this goal. We expect this freely available initiative to evolve into a worthwhile tool for our clients, service people and many industries.

We believe that the HOFFE Equipment register is a great tool for the following groups;

- › Architects
- › Consultants & Engineers
- › Accredited Inspection Bodies
- › Insurance Companies
- › Business owners
- › Installation, Maintenance & Testing Contractors
- › Fire System Designers
- › Evacuation Consultants
- › Territorial Authorities
- › Government agencies
- › Fire & Emergency N.Z.
- › Equipment Importers
- › Accredited Importers
- › Standards N.Z.

Those looking for Hand Operated Fire Fighting Equipment on this register can be assured that the companies listed are selling compliant product and have been through the right procedures in bringing this equipment into the country. This is why the company that has cleared the listed products for use is also listed on the register as are the FERN numbers for the fire extinguishers.

We realize that the HOFFE register is an evolving project, but we also figured that we could get it up and running then work on it or add to it as needed. Our next group target is to get the HOFFE service register up and running. We are hopeful this will spend less time in the development stage than our equipment register has and look forward to launching the service register.

Kind Regards,

Steve Smith,
HOFFE SIG Chair 2019

CHARTER UPDATE

Passive Fire Protection SIG Update

› Author **Paul Ryan** – Passive Fire Protection SIG Chair

The Coatings group have had two more meetings since our last newsletter update and are making great head way in the production of the new FPANZ technical guide for fire protection coatings in New Zealand.

We have also had another meeting between Competenz and the FPANZ NZQA working group and things are moving along well, still on target for a 2019 launch of the new qualification for passive fire protection installers.

The quarterly Passive Equipment Register update has seen another new member join the ranks as well as an update from an existing register member with even more systems being added to their listing.

Attendance grows with every meeting which surely proves we are bringing positive change to the industry, people don't mind giving up valuable time when "stuff gets done"!

On a final note, it was good to see comments made recently by Dame Judith Hackitt in Melbourne speaking to an audience of fire protection and building professionals where she underlined the parallels between the UK and Australian cladding problems and that cladding was only one of the issues, and that enforcement and removing conflict of interest was crucial to addressing the problems. I don't see a problem wearing multiple commercial hats in such a small market like New Zealand – the problem arises when these conflicts of interest are not disclosed. We will continue to drive for transparency in all aspects of the passive fire protection industry – it's crucial in our efforts to raise the life safety bar in our country!

- **Paul Ryan**

Passive Fire Protection SIG Chair 2019

Evacuation Consultants SIG Update

› Author **Phil Jackson** – Evacuation Consultants SIG Chair

With the evacuation consultant qualification revision now nearing completion we will begin work to update our code of practice.

Following on from our last meeting we welcome a greater input from fire risk officers, working together we will be able to ensure we offer more consistent advice throughout the country. Ultimately this should aid all scheme applications, and improve general awareness of the value of evacuation planning.

Here are a couple of tips from the Fire Information unit (FIU) to assist with scheme applications:

- When making Marquee and Temporary Structure Applications – The best method of compliance from our experience, is to provide a Training Programme rather than Trial Evacuations.

- Detailing firefighting equipment and where it is located when making a scheme application - There must be a detailed description of where in the building any firefighting equipment is located on at least one of the following documents; FAN, Training Document, Scheme Document or building footprint map. It is then acceptable to refer to the location as 'throughout the building'.

You are encouraged to continue to submit your queries through to evac@fpanz.org these can be discussed with FENZ and the other members at our meetings.

- **Phil Jackson**

Evacuation Consultants SIG Chair 2019

Thanks to our trade association membership with Site Safe, as a Fire Protection Association of New Zealand member you receive a 10% discount on your Site Safe membership.

The benefits of being a Site Safe member are:

- › Get discounts on all Site Safe courses.
- › Be recognised by the industry as showing commitment to health and safety.
- › Membership logos and yearly membership certificates and 'Proud to be Safe' member stickers for promotional use.
- › Receive newsletters and access to our exclusive resources including Site Safe's library of toolbox safety talks, guidelines and research.
- › Inclusion in Site Safe's online member directory.
- › Members receive networking and knowledge sharing opportunities at member event hosted around New Zealand.
- › Free posters to help spread important construction health and safety messages to all on site and throughout the workplace.

Inspectorate SIG Update

› Author **Tony Carline** – Inspectorate SIG Chair

Firstly, I would like to introduce myself. I am Tony Carline, and I work for Aon in a Sprinkler Certification, Sprinkler Inspection and Alarm Inspection capacity. So a jack of all trades so to speak. I have been in the industry for 29 years.

COMMISSIONING OF SYSTEMS

I would like to comment on Commissioning of Fire Protection Systems. When an inspector is called to site to undertake an inspection of a fire protection system, it is expected that the system has been commissioned by the contractor prior to our arrival. Our inspection of the system is an Audit of the system, and we are not there to undertake the system commissioning tests. NZS4541 Part 12 and NZS4512 Part 6 outline the requirements for testing of systems.

All too often, we are called to site and the system is not ready for us. Yes, we acknowledge there are pressures from builders etc to get us onto site to undertake our inspection. But to turn up to site to undertake a final inspection and find equipment not fitted off or completed, programming faults on fire alarm systems, or undertaking the inspection while the premises is still a construction site does not bode well for getting a sign off. Also of concern is what are the fire alarm contractors changing in the programming after the inspector has left the site?

Recently I was asked to undertake a final inspection and arrived on site to see ceilings not installed, painting in progress, and no floor coverings in place due to the state of the construction site. It was not possible to complete the inspection as floor coverings will dampen the sound, what else was being installed on the ceiling, would there be obstructions etc.

PAINTED SPRINKLER HEADS

Fire sprinkler heads are sold with plastic transport clips in place. These clips are there to provide some degree of protection during transit. These clips are not designed to be protective covers to prevent paint getting on to the sprinkler head. The suppliers have sprinkler boots that can be installed until all painting has been completed. I have been advised of projects where spray painting has been undertaken, with the result being a good finish on the ceiling but the sprinkler heads were contaminated. What was more disconcerting was that the contractor went through and installed the escutcheon plates after painting was completed, but did not change the sprinkler heads. So after the inspection was completed, the contractor was given a list of contaminated sprinkler heads to replace, after the system was full of water.

Sprinklers can only have factory applied finishes and cannot be painted elsewhere. Why? Manufacturers warranty can be voided, the potential to inhibit sprinkler head release, delay sprinkler release, and inhibit spray pattern coverage. There are also concerns that the glass bulb can be scratched, causing it to release at a later date.

Contaminated sprinkler heads should be picked up during commissioning or the contractors walk through before the Inspectors are there to do their final inspections.

- **Tony Carline**
Inspectorate SIG Chair 2019

EXHIBITOR REGISTRATIONS NOW OPEN

fire NZ 2019

CONFERENCE & EXHIBITION

WWW.FIRENZ.ORG

THE FUTURE OF FIRE PROTECTION

FireNZ 2019 will be held in Auckland, New Zealand 4th – 6th September 2019. The conference is once again presented by the Fire Protection Association of New Zealand, the Society of Fire Protection Engineers NZ Chapter, and the Institution of Fire Engineers New Zealand Branch.

Our annual FireNZ national conference has established a reputation as the premier fire industry event for keeping abreast of advancements in all aspects of fire safety in New Zealand.

The conference theme **“The Future of Fire Protection”** is an opportunity to look at advancements and developments in the field of fire safety.

The FireNZ Conference and Tradeshow 2019 will provide you with the opportunity to create valuable connections and new business opportunities with key industry buyers, suppliers, stakeholders and leading international experts. This year we have changed the tradeshow hours to better suit our exhibitors and maximise the time spent with our delegates. For more information or to book a stand please visit www.firenz.org

Delegate registrations will be opening soon.

IN-CONFIDENCE

UPDATE

DATE	28 February 2019
TO	P4541 Committee and nominating organisations
FROM	Chris Mak, Chair – P4541 Committee
SUBJECT	Update on the proposed amendments to NZS 4541:2013 <i>Automatic fire sprinkler systems</i>

PURPOSE OF THIS UPDATE

The committee revising NZS 4541 has had five meetings to date. The fifth meeting was held late in February 2019 and this was the final meeting before the draft is finalised and released for public consultation.

This is an update of progress to date, which is intended to be circulated to the committee members, who, in turn, are encouraged to update their nominating organisation on the progress of this project.

It needs to be noted that committee deliberations are confidential. This is to ensure, among other things, that committee members are not subjected to undue pressure and that assumptions are not made by members of the public as to what may be published.

Nominating organisations are also encouraged to feed back to their committee member(s) on any changes they may desire. The scope of the project to revise NZS 4541 has already been decided, but there is still limited opportunity to make minor changes before the public consultation.

UPCOMING MILESTONES

The project is on schedule to be released for public comment in April/May 2019, with publication due in September 2019, provided all copyright licence agreements are in place as planned. The copyright licence agreements are for arrangements where content from another publication(s) has been used in preparing the current NZS 4541 draft standard. Before public consultation, the draft will be released to the Building System Performance branch (MBIE), the International Accreditation New Zealand and the University of Canterbury for some targeted feedback. This has agreed with me (as the chair) and the Manager Standards New Zealand (as a delegate of the New Zealand Standards Executive).

SUMMARY OF MAJOR CHANGES PROPOSED

The following major key changes to NZS 4541 are envisaged:

- 1) The provisions for seismic resilience have been rewritten to reflect the requirements of NZS 1170.5:2004 *Structural design actions – Part 5: Earthquake actions – New Zealand*. This will require that the seismic design forces in NZS 4541 standard reflect those in NZS 1170.5, instead of the previously de facto design acceleration of 1.0g. In some buildings, the required design loads will be lower, while in other buildings, the design loads will be considerably higher. A maximum design acceleration of 3.6g is being proposed.

continued overleaf...

- 2) One proposed change that will impact on manufacturers and importers of sway bracing components is that seismic bracing elements will need to be listed by a sprinkler system certifier (SSC). The proposed listing standard is an ANSI standard, FM 1950:2016 *Seismic Sway Braces for Pipe, Tubing and Conduit*, or an equivalent standard. This standard can be downloaded from the [FM Approvals website](#). The committee notes that, while the FM Approvals standard will meet the requirements of this standard, verification of compliance from accredited testing laboratories will allow listings of seismic bracing elements by a SSC following other criteria that meet the requirements of the standard.
- 3) A proposal to combine hydrants and sprinklers in tall buildings in order to add resilience and potentially reduce cost will be also put forward to public comment. This was as a result of reviewing the [Lacrosse Building Fire in Melbourne](#) on 25 November 2014, where 26 sprinklers operated over 16 floors in conjunction with hydrant hose streams. The committee considered that if a similar fire occurred in New Zealand, the separate hydrant and sprinkler risers would not have allowed the excessive numbers of sprinklers to operate.
- 4) Another significant issue that will be the subject of a request for specific public comment is to set a requirement that work on a sprinkler system is carried out, or supervised by, suitably qualified personnel. The acceptable qualifications are likely to be NZQA qualifications, or those accessed as being equivalent to them.
- 5) There are also significant changes being proposed to pump speed control requirements, due to the complexity of the design solutions being promoted by industry.

Standards New Zealand is not in a position to provide the details of the changes, as the revised draft standard is not ready for public comment. It is important to remember that any changes cannot be confirmed until after the public comments are reviewed and the final draft is presented to the Standards Approval Board and approved.

FireNZ 2019 Conference needs YOU!

THE FUTURE OF FIRE PROTECTION

We want to hear what you have to say... and so does everyone else.

Present your work at the premier fire conference in New Zealand. FireNZ attracts attendees Nationwide and beyond. Your ideas will reach the widest possible audience.

FireNZ is now seeking abstract submissions from authors wishing to present papers at Fire NZ 2019 September 4th - 6th in Auckland, New Zealand.

The conference will showcase advanced cutting edge practices in fire protection engineering that are used to protect people, property and the environment from fire.

4TH - 6TH SEPTEMBER 2019
VODAFONE EVENTS CENTRE, AUCKLAND

SPEAKER BENEFITS

All selected key note conference speakers will enjoy free three-day registration including all refreshments excluding the Gala Dinner. Other main stream speakers will receive free one-day registration.

ABSTRACTS

The 2019 Conference Program Committee will review all abstracts and make final speaker selections based on level of innovation, quality, relevance, focus, practical application, and timeliness.

Abstracts must be submitted by 5th April 2019, although early submission is encouraged.

MORE INFORMATION:

If you would like to speak, present or participate in FireNZ 2019, please contact info@fpanz.org

Two New NZS 4512 Formal Interpretations

› Author **David Prosser**

Towards the end of 2018 two new Formal Interpretations were issued to NZS 4512:2010 *Fire Detection and Alarm Systems in Buildings*.

FI-136 clarifies requirements for connection to a remote receiving centre. Specifically, whenever a building consent requires a remote connection this must be made to a FENZ receiving centre. In addition, any optional connection to a security monitoring centre must still comply with the same technical requirements as for a remote connection to FENZ (these include Manual isolation facilities, latching Fire signal, partial automatic isolation and

defect signal on restoration of Brigade Silencing Switch, transmission of Defect signal, regular testing capability, continuous communication, separate supervised transmitting device power supply).

FI-137 confirms that in Type 5 and Type 7 systems, where sprinkler heads are not required in skylights, then heat detectors are not required in that skylight either. More generally, heat detectors are not required anywhere there is fully-compliant NZS 4541 or NZS 4515 sprinkler system coverage.

Formal Interpretations overleaf...

Fire formal interpretations

27 September 2018

FI-136

NZS 4512:2010 *Fire Detection and Alarm Systems in Buildings* – Clause 105 and Remote Receiving Centre

Question:

NZS4512:2010. Clause 105 and Remote Receiving Centre

1. If a building consent requires a fire alarm system to be connected to a remote receiving centre as defined in NZS 4512, does a security monitoring company connected permanently to a fire alarm system and receiving FIRE and DEFECT signals from that system meet the requirements of clauses 105(a) and 105(b)?
2. If a building consent does not require a fire alarm system to be connected to a remote receiving centre as defined in NZS 4512, and that fire alarm system is permanently connected to a security monitoring company to receive and immediately act on FIRE and DEFECT signals, may a 24-hour battery standby calculation as specified in clause 213.1 be used in that situation?
3. Clause 209 details the Manual Isolation requirements from a remote receiving centre – *Facilities shall be provided for manually isolating the normal alarm functions of the system from the remote receiving centre. A mechanism shall also be incorporated to guard against the system inadvertently being left in the isolate mode. Isolating of the system shall initiate an isolate signal being transmitted to the remote receiving centre.*
Is clause 209 applicable to items 1 and 2 above?

Interpretation issued by the Alarms and Detection Group:

1. No. Appendix A1 requires such remote connection to be to a Fire & Emergency NZ (formerly NZ Fire Service) remote receiving centre.
2. Yes, provided the security monitoring centre will actually take immediate action to summon a service contractor response in receipt of a DEFECT signal.
3. Yes. Clauses 204.12, 205.4, 208.2, 602.6, A1, A2 and A3 are also applicable.

Fire formal interpretations

10 October 2018

FI-137

NZS 4512:2010 *Fire Detection and Alarm Systems in Buildings* – Heat detectors in skylights of Type 5 and Type 7 Sprinkler-protected buildings

Question:

In a Type 5 system with a fully-compliant sprinkler system to NZS 4541:2013, where sprinklers are not required in skylights per clause 516 of NZS 4541, and smoke detectors are not required per NZS 4512 clause 405.1.3(a) and FI-104, are heat detectors required in those skylights?

In a Type 7 system with a fully-compliant sprinkler system to NZS 4541:2013, where sprinklers are not required in skylights per clause 516 of NZS 4541, and smoke detectors are not required per NZS 4512 clause 405.1.3(a) and FI-104, are heat detectors required in those skylights?

Interpretation issued by the Alarms and detection group:

NO

No

NOTE: Clause 405.2.2(h) states the overriding principle that heat detectors may be omitted in the presence of a fully compliant NZS 4515 or NZS 4541 sprinkler system.
