

Industry Update

› FEBRUARY 2019 ISSUE

WELCOME

Welcome to the first newsletter of 2019

I would like to welcome you all back – hard to believe we are already at the end of month two of 2019. As you can see, the newsletter has had a bit of a refresh, which underlines some of the other branding updates we have been working on this financial year. I will update you on what's been going on since December's newsletter and the projects we are working on for the remainder of the current financial year.

Scott Lawson

Proposed workplace training reforms

On Wednesday 13 February, the government announced the proposed major changes to New Zealand's Vocational Education and Training (VET) system. These proposed reforms will affect all industries, including fire protection. While there is a definite need for review and improvement, the announcement was far more wide reaching than we expected. More importantly, the consultation period of just six weeks is insulting, and I do not believe it gives you, the industry, the opportunity to consider the proposals and respond.

We have further information on this on page 7 of the newsletter, and I encourage you to have your say. I will be attending a meeting with our ITO, Competenz, on 28 February and hope to have more to report shortly after. We will be making a submission on behalf of members, but please consider making a submission of your own to ensure your voice is heard.

Below are some links that might be of interest: 

- › **Reform of Vocational Education:**
Consultation discussion document

- › **Competenz statement**

Get it Right Seminars

We are currently finalising dates and training material for further seminars for this year. We have sent an expression of interest document to our members, which is also included in this newsletter on page 11. If you would like to be contacted as details are confirmed, please send the form back to us with numbers and location, and we will add you to the register to be contacted in the next few weeks.

Special Interest Group (SIG) Chair Positions

We will shortly be carrying out nominations and voting for the two vacant chair positions. These are with the contractors SIG and the inspectorate. Jason Godsmark is carrying on in a temporary capacity while we receive nominations for the position of inspectorate chair. The contractors SIG will be getting a new chair once the nomination process is complete. Voting for SIG chairs is restricted to members of the respective SIG.

Training SIG Update

While the training SIG didn't achieve its primary objective in the timeframe we planned, we have learnt a lot from the process. Given the importance of training and of raising the profile of the industry with school leavers and those in the employment market, the board decided that a reboot of this group was required. We have narrowed the scope to a more manageable list of objectives and to allow for specific funding to be targeted at one or two key objectives as approved directly by the board.

As such, the training SIG has now been replaced with the Training and Careers Development Sub-Committee, a special project team that will focus on developing training material, courses and industry careers. This team will report via a selected specialist directly to the CEO and board. The committee will have two specific goals: raising the profile of careers in fire protection by attending careers days and the like, and the development and completion of a gateway-type programme with all the principles and objectives of the Fire101 pilot.

New Members

I would like to welcome **Wayne Bowden Painters Ltd** and **Altex Coatings Ltd** as the newest members of our association. It's great to see the continued growth of the passive sector of our association and to gain two new members so early in the new year.

In closing this month's newsletter, I am looking forward to another year and achieving more great things for our industry in 2019. As always, please share the newsletter with your staff as there is plenty of relevant content and news.

Until next month ...

Regards, **Scott Lawson**
Chief Executive Officer, FPANZ

Use of FPANZ Logo

Recently we have noticed that some of our FPANZ members (and even non-members) have been incorrectly using our FPA trademarked corporate logo.

This logo is not to be used by any entity without the written permission of the Chief Executive Officer and/or FPANZ Board. The purpose of this logo is to provide a corporate identity for the Association in its general course of business activities.

The FPANZ membership tier status logos shown below are licensed to be used by any financial member of FPANZ who has signed up to the FPANZ Code of Ethical Conduct and is fully compliant with all its requirements.

For a list of logo guidelines please visit our website <http://www.fireprotection.org.nz/about-us/logos>.

If you are using an incorrect logo and would like to request a membership logo for use, please email info@fpanz.org

If you are not an FPANZ member and have not gained written permission to use the FPA logo, then we ask that you remove it from your website, email signature or anywhere else that it is currently being used.

It's amazing what can happen when your team isn't satisfied with "good enough."

Get ready for the DV-5A – our new and improved deluge valve. We streamlined the original DV-5, creating an even simpler design with a lower pressure drop and higher pressure rating up to 300 PSI. Plus, with a reduced footprint and integrated alarm port, installation and maintenance are easier than ever. Learn more at www.tyco-fire.com/DV5A.

FireNZ 2019 Conference needs YOU!

fire **NZ**
2019

THE FUTURE OF FIRE PROTECTION

We want to hear what you have to say... and so does everyone else.

Present your work at the premier fire conference in New Zealand. FireNZ attracts attendees Nationwide and beyond. Your ideas will reach the widest possible audience.

FireNZ is now seeking abstract submissions from authors wishing to present papers at Fire NZ 2019 September 4th - 6th in Auckland, New Zealand.

The conference will showcase advanced cutting edge practices in fire protection engineering that are used to protect people, property and the environment from fire.

4TH - 6TH SEPTEMBER 2019
VODAFONE EVENTS CENTRE, AUCKLAND

SPEAKER BENEFITS

All selected key note conference speakers will enjoy free three-day registration including all refreshments excluding the Gala Dinner. Other main stream speakers will receive free one-day registration.

ABSTRACTS

The 2019 Conference Program Committee will review all abstracts and make final speaker selections based on level of innovation, quality, relevance, focus, practical application, and timeliness.

Abstracts must be submitted by 5th April 2019, although early submission is encouraged.

MORE INFORMATION:

If you would like to speak, present or participate in FireNZ 2019, please contact info@fpanz.org

HOFFE SIG Update

› Author **Steve Smith** – HOFFE SIG Chair

Well it has been discussed and voted on and it looks like the HOFFE group are stuck with me for another year, sorry about that!! We have had our first meeting of the year and agreed some goals for the year as well as discussed current issues. The main goals are the HOFFE listed product register (nearly ready) and the service code of practice.

It was also pleasing to have Shannon and Brendan of Flamestop join us, of interest to the group was Shannon's input as to how the Australians are dealing with the foam issue. In short as Australia has various different states they have often different approaches to issues, however other than the expensive process of incineration there is no environmentally acceptable solution for the disposal of foam.

Obviously, the diluted quantities of foam used for HOFFE are not the focus of powers that be, that said we still need to be sensible, careful and responsible in our own actions remembering that often people's perceptions of our actions (right or wrong) may be what drives them to make a

complaint. I believe that as an industry we are quite mindful of the environment and do not willingly set out to cause harm to the environment in which we live. That said without even considering the potential danger to life from fire, the environmental damage that can be created by using a fire extinguisher (containing 6% foam and 94% water) is most often a lot less than the damage that could or would have resulted from an uncontrolled fire!!!

We have also seen quite a few companies selling and servicing fire equipment who may struggle to meet the definition of a "Competent Person" as defined by NZS 4503. Obviously, we all need to be careful when throwing stones but to benchmark the industry most operating in it should have attained or be working towards a minimum of a Level 3 HOFFE qualification.

Regards,

Steve Smith,

HOFFE SIG Chair 2018-19

CHARTER UPDATE

Passive Fire Protection SIG Update

› Author **Paul Ryan** – Passive Fire Protection SIG Chair

The year has started off with a huge work load ahead of us: We have the coatings group working on a new technical guide for Intumescent and protective coatings, NZQA level 3 installers qualification being driven by a separate group with a target delivery date mid-2019, Technical position statements being reviewed for imminent release, New software for the passive equipment register being sourced to enable much easier navigation due to the sheer mass of information now listed, and some thought going into a potential new NZQA qualification for designers and specifiers. There's a lot going on!

The drive from the association is a top to bottom structured approach to passive fire protection. If you get the design, the product testing, installation, and the inspection process well defined and with technical guidance and supporting qualifications in place then the life safety bar will inevitably be raised!

It's true to say that some problems still lay with the builders and there is guidance required in that space, but if we can get to a point where the specification clearly defines that the design be carried out by a person with XX qualification, the products preferably sourced from an industry register, that the installation be carried out by an NZQA level 3 installer then things will improve for sure!

This year we will be targeting builders and others in the difficult coordination space surrounding passive fire protection. We have several "get it right" seminars coming up which we hope will be well attended by all investors industry.

On behalf of FPANZ – I would like to thank all the SIG members who dedicate so much time to the work we do – we couldn't do it without you!

- **Paul Ryan**

Passive Fire Protection SIG Chair 2017-18

Evacuation Consultants SIG Update

› Author **Phil Jackson** – Evacuation Consultants SIG Chair

Firstly I wish you all a Happy New Year. The year has certainly got off to a positive start for me with FENZ attending three scenario based trial evacuations to date in the Auckland region. This has been well received by those taking part.

Last year I spoke about reviewing the Evacuation Consultant qualification, a review and relevant changes have now been made. The documents will be sent out to the SIG members for comment shortly.

By now you will be aware of the fire action notice signage requirements from the regulations, it has been noted that many people are trying to vary the design of

the signage most likely to improve the appearance. FENZ have said that we need to adhere to the regulations in order to maintain the intent of the regulations in making the signage 'standout'.

You are encouraged to continue to submit your queries through to evac@fpanz.org in order these can be discussed with FENZ and the other members at our next meeting on 8th April.

- **Phil Jackson**

Evacuation Consultants SIG Chair 2017-18

Vocational Education Reform

– *Competenz Key Messages*

The government has released a plan to reform industry training – and this affects everyone who connects with Competenz.

Much of the media coverage about the Vocational Education Reform has focused on the plan to merge all 16 polytechnics, however industry training organisations (ITOs) would also be merged into a centralised national structure.

Under the proposals, ITOs would no longer arrange training or support the learning and assessment of apprentices and trainees in the workplace. The new national polytech would be responsible for delivering all training, including on-the-job learning in the workplace and off-the-job learning in the classroom.

The ability for businesses and industry associations to influence and control how workplace training occurs and how it fits business needs may be reduced. The

proposed structure splits standard setting from arranging training, meaning training design and delivery would be disconnected.

It is unclear what the proposals mean for niche sectors that don't currently work with polytechnics and instead work directly with Competenz to design effective tailor-made training solutions. There is concern these specialised sectors have been overlooked.

It is also unclear who will be responsible for promoting apprenticeships and industry training to schools, supporting them with trade-related

learning in the classroom, arranging and delivering the Gateway programme, and connecting with your industry.

There is no doubt some changes to the system are needed, and funding needs to be directed to where it is needed most to alleviate New Zealand's skills shortages.

But there is concern the government's proposal is trying to fix a part of the system that is not broken.

We have an opportunity to strengthen the system but these proposals suggest too much change, too quickly.

... funding needs to be directed to where it is needed most to alleviate New Zealand's skills shortages.

TIMEFRAME

There is a short window to have your say. A Competenz survey is open until Friday 1 March 2019. The information will be used to support its submission to the government.

All submissions to the proposed Vocational Education Reform close on 27 March.

The Importance of Flushing Sprinkler Systems

Author **Stephen Ridder** – Aon Fire Protection

A sprinkler system is entirely dependent upon water. Pipe sizing, pipe bracketing, sprinkler head design, design densities, the obstruction rules and so on are all predicated on the basic assumption that the required volume of water is available at the sprinkler head. A clean water supply is imperative to the performance of the system and flushing is an important component of ensuring the supply is clean.

As fire contractors know new underground pipe has to be flushed at high volume for a period of time. The volume has to be sufficient to transport any foreign material that maybe lying in the bottom of the pipe. However this flushing doesn't just transport materials in the new pipe but maybe the first time a high volume has been pulled though the towns main; as a result it is not uncommon to drag old debris from the existing network.

One other point to note is the debris doesn't move through the pipe at the same speed as water travels. While you can calculate how long it takes the water from the start point to reach the other end of the pipe stones etc etc will tumble along at a much slower speed. This slower transport time needs taken into account when deciding how long to flush a pipe for. Lastly, when discussing the need to flush the mains on a project make sure the civil contractor understands you are referring to high volume debris flushing; not chlorination flushing.

The flushing requirement was introduced into the standard when a Risk Engineer working for a broking house noted that there was loose gravel in a 300mm underground site main. An instruction was issued to flush the main, and this was

attempted by flushing through a 65mm stand-pipe. The velocity through the pipe would be obviously very low, in the order of less than 1m/s. An incident occurred on this site, and some 18 sprinklers were blocked by gravel. The details of this incident were conveyed to the Standards New Zealand Sprinkler Committee, who effectively copied the requirements from NFPA13.

I am aware that many a contractor will have been challenged on why flushing needs undertaken. Flushing can be quite disruptive especially as the total volume of water discharged can be significant and normally needs done when the head contractor is trying to construct the foundations. Recently we were flow testing some new fire hydrants on a project and had several very small stones eject from the flow meter, but the big stone was far more of a problem; see

photo. Just imagine if the fire service had been using the hydrant to fight a real fire; their operations would have been somewhat impacted as the fire hydrant was almost completely blocked.

Likewise it is quite common to find plastic swarf from the

pipe preparation of polyethylene pipes wrapped around the flow meter after we test fire sprinkler systems. This swarf is a very real concern as it will pass though the sprinkler pipe network until it gets blocked at tees and sprinkler heads. Once this plastic swarf enters a sprinkler system it will stay in the pipe forever.

While it is disruptive, proper flushing is a key part to the foundation of sprinkler system reliability.

While it is disruptive, proper flushing is a key part to the foundation of sprinkler system reliability.

Behind the Scenes of Fire Tests

Author **Hans Gerlich** – Senior Engineer

Fire testing is a fickle and expensive business, and once a positive result has been achieved there is little incentive to test again. This in turn means that fire test data can sometimes be rather dated.

But one of life's certainties is change; things never stay quite the same. For example, gypsum is a natural resource and although supplied from the same mine, extraction location and depth inevitably change. Similarly, and despite careful control of incoming goods, additives may subtly change with time. On the other side of the equation fire test standards, furnaces, and data acquisition methods evolve. For instance, the main fire test facility in New Zealand recently converted furnaces from diesel to run on gas.

We must accept that 'creep' occurs and that subtle changes can combine to cause larger effects over time. With this in mind we have, over the last 2 to 3 years, invested heavily in a 'refresh' fire testing and development programme of work, which has culminated in the release of our new Specification and Installation Manual 'GIB® Fire Rated Systems, 2018'.

Here at Winstone Wallboards we do not miss an opportunity to get down and dirty as we involve ourselves with construction and instrumentation of specimens, observation of tests, and subsequent data gathering and analysis. We do not simply

adhere to minimum test standard requirements and include additional temperature measurements (thermocouples) to find out what is going on in the framing cavity and between layers. This allows us to determine the effect of variables such as framing type, cavity insulation, type and thickness of linings, and any composite actions. The in-depth knowledge gleaned by our team of engineers from extensive data analysis allows us to respond quickly to customer enquiries and, where appropriate, assist with finding project specific solutions.

The new 'GIB® Fire Rated Systems, 2018' Manual contains, in printed and easily digested form, our most common fire-rated construction elements and gives details that aim to ensure construction of reliable passive fire protection in New Zealand buildings.

In an ever evolving world, printed literature is out of date the moment it hits the market, but our commitment to ongoing development continues.

Acknowledging this, we intend to use our website **gib.co.nz** for future 'live' updates and to post regular outputs as common threads emerge from market enquiries.

For further information and advice go to gib.co.nz or call the GIB® Helpline on 0800 100 442.

LEFT: Steel studs glow red-hot immediately following a pilot-scale furnace test. **MIDDLE:** A timber framed specimen at the end of a full-scale furnace test. **RIGHT:** Thermocouples collect important temperature data.

New GIB® Fire Rated Systems Manual Out Now

Good fire design requires coordination and collaboration between a number of parties from the fire engineer to architect, contractor and sub-contractors like installers.

With the release of the updated GIB® Fire Rated Systems literature, we aim to help reduce confusion in the market about fire rated systems and provide good guidance on issues that commonly come up when dealing with fire.

The GIB® Fire Rated Systems literature is already a core resource for the design and detailing of fire rated systems within New Zealand.

This update has largely focused on simplifying and clarifying information, systems and details to make it easier for both designers and installers to correctly and quickly utilise the information within the GIB® Fire Rated Systems literature. In addition, reducing costs of fire systems and detailing has also been a key focus, leading to many of the new systems, underscoring our commitment to lowest total cost systems.

The literature update adds a range of new tested GIB® systems including the inclusion of 10 minute smoke separation walls, and timber and steel systems offering FRRs of between 30 minutes and 180 minutes.

In addition to a wider range of systems, Winstone Wallboards has released a new product: GIB Fire Soundseal®. GIB Fire Soundseal® is a single component, non-sag, acrylic based interior sealant for use where specified.

Additional or clarified guidance has been included on NLB steel stud heights, top-down fire exposure design, and use of metal components within suspended ceiling grid systems. Many junction details have been clarified or added, including new deflection head details.

The GIB® Fire Rated Systems literature is available for download from the GIB® website. Copies of the literature can also be requested through gib.co.nz

For further information and advice go to gib.co.nz or call the GIB® Helpline on 0800 100 442.

EXPRESSION OF INTEREST - "GET IT RIGHT" Seminar Series

Fire Alarms Best Practice – Sprinkler Systems – Passive Hands-On Training

FPANZ is planning to run a series of full-day workshops throughout the country to continue its plan of education and information to ensure the industry is continuing to get the latest information and support. We would appreciate feedback about what training would be preferred by your company and at what locations. **Please Note: FPANZ will set workshops according to demand and some topics may not proceed in a region if demand is low.**

SUGGESTED TOPICS:

Fire Alarms • Sprinkler Systems • Passive Hands-On Training

WHO SHOULD ATTEND:

The seminar/workshops are particularly aimed at those involved in design, fabrication, supply, specification, installation and testing of Fire Alarm Systems. Those who should attend include:

- Fire Alarm/Sprinkler system designers and estimators
- Fire Alarm/Sprinkler system installation supervisors and charge-hands
- Fire Alarm/Sprinkler system installers/technicians
- Installation/Council inspectors
- Maintenance technicians
- Fire system surveyors
- Fire Alarm/Sprinkler system component manufacturers and suppliers

PROPOSED WORKSHOP LOCATIONS:

Auckland • Rotorua • Wellington • Christchurch • Dunedin

PROPOSED INVESTMENT:

The cost for these workshops will be advised once venues have been confirmed.
Catering is provided for this full day seminar consisting of morning/afternoon tea & lunch.

PLEASE COMPLETE THIS EXPRESSION OF INTEREST FORM

detailing which workshops you would be most likely to book your staff to attend, including how many at each location.

Location	No. of proposed attendees at each workshop & location
