

Commentary

Scott Lawson

Welcome to this month's newsletter.

With the year racing past, we have hit the halfway mark already! However, the association is making some great progress in key areas, and the special interest groups (SIGs) are all on target with their objectives for the year. Please take the time to read the SIG chair reports each month, even if you can't get to the meetings. It's a great way to keep up with what's going on in your field and the key objectives the FPA is working on.

Grenfell Tower Fire

We were of course deeply shocked and saddened to hear of the terrible turn of events in London. Obviously, our thoughts are with those who lost their lives, the families, and the wider London community. The loss of life from this tragedy is difficult to comprehend in this day and age. Given we work in the fire protection industry, many of us struggle to accept something of this nature happening. Many media agencies have approached us for comment, and our first media release about the tragedy appears on [page 2](#). The association is also waiting for more details to come to light to see what lessons can be learned and how the findings can be used here in New Zealand.

Members' Meetings in Wellington and Christchurch

We will be conducting members' meetings and some SIG meetings in Wellington and Christchurch in the next few months. As previously, the meetings will include an FPA update and a speaker on a topic of interest.

Equipment Registers

The association has operated a fire alarm equipment register for many years, and this is available as a free download from our website. To go with this, we are also close to rolling out two new registers: the HOFFE equipment register and the passive products register. We are launching these to provide industry, councils, facility managers, business owners, and the general public with an easy way to see which product suppliers meet or exceed appropriate requirements, such as standards or testing. If the relevant requirements are not met, then products won't be listed. Our members have been asking for a way to differentiate themselves and their products from lesser products that don't meet relevant standards, and members of the public and many agencies often contact our association asking for recommendations.

These registers will be an easy way to raise the profile of companies that list their products. Expect the registers to start coming online in the next few weeks; if you have products to list, get in contact with us, and we will advise you of the process.

Membership Renewal

With the new membership year starting on 1 July 2017, now is the time to review your company's details. We have recently been collecting updated information, which will flow through onto our website in the coming weeks. If the size of your company has changed, please let us know before renewing your membership. Remember, membership tier status is based on your staff levels, so it is important to see where your company fits in and whether you need to increase your tier status if you have added new staff.

- **Bronze:** 1-4 employees or full-time equivalents
- **Silver:** 5-14 employees or full-time equivalents
- **Gold:** 14 or more employees or full-time equivalents

Commentary cont.

It is also a perfect time to provide us with the details of any staff who need to receive the newsletter or information on upcoming training events.

Industry Training

The association continues to make training one of the biggest priorities for the year. The training SIG is now focusing on some short-, medium-, and longer-term goals; further details are available in Trent's update, but we are really driving this area so we can deliver something meaningful to the industry. We encourage you to get in contact with us and have your say on what key topics need

to be delivered. We plan on putting more and more effort into this area, as the industry has not done enough to attract youth or continue the professional development of those already in the industry.

New Member

I would like to welcome Phillip Watkin as a new individual member to the association.

Until next month

Regards, **Scott Lawson**
Executive Director, FPANZ

MEDIA RELEASE

Grenfell Tower tragedy less likely in New Zealand

- Author **Scott Lawson** - Fire Protection Association of New Zealand

The Fire Protection Association (FPA) of New Zealand and its members were deeply saddened by the tragic events that recently unfolded at the Grenfell Tower apartment complex in London.

We wish to express our deepest sympathy and condolences to the victims' families, and the wider community, while also acknowledging the valiant efforts of the firefighters and other emergency service workers at the scene.

Initial media reports suggest a lack of sprinklers, inadequate fire detection and alarm systems, and insufficient passive fire-stopping in the Grenfell Tower.

FPA New Zealand strongly believes that the correct mix of sprinkler systems, fire and smoke detection, evacuation alarm systems, fire extinguishers, hose reels, and passive fire/smoke protection installed and maintained by competent fire protection professionals is critical to life safety in any building.

A similar building in New Zealand would almost certainly be sprinkler protected and most likely also fitted with smoke detectors, evacuation alarm

systems, and passive fire-stop and smoke-stop protection as required by the New Zealand Building Code and local Standards. Such fire protection systems would also be subject to regular mandatory inspection and testing under the Building Warrant of Fitness (BWOFF) system.

New Zealand's fire protection codes and regulatory framework are among the most rigorous in the world, refocused in recent years around life safety. Even so, we are continuously looking for ways to improve them.

The Fire Protection Association of New Zealand and its members await the outcome of investigations into this tragedy. We will ensure that any applicable findings will be used to improve NZ's practices even further in the protection of life and property from the impact of fire.

We are in regular contact with partner associations and affiliated bodies globally. As updated information comes to hand we will communicate this as appropriate.

For further information about this media release of the Fire Protection Association of New Zealand or our members, contact Chris Mak - Vice President or Scott Lawson - Executive Director via fpanz@fireprotection.org.nz or www.fireprotection.org.nz 

Fire Protection Shutdowns

- Author **Stephen Ridder** - Aon New Zealand

A recent fire in a 21 storey building in the Auckland CBD has highlighted the deleterious effect that fire protection shutdowns can have.

What should have been a relatively simple exercise for the New Zealand Fire Service (NZFS), to shift water to the top of building, became quite complex as the NZFS had to run hoses up the stairwell, from the ground floor to the roof; refer <http://www.stuff.co.nz/auckland/92738665/Fire-in-central-Auckland-high-rise-building> 

Aon encourages fire contractors and construction companies to keep fire sprinkler systems and fire hydrant systems online as much as possible. This includes through the construction and demolition phases as well as during building alterations.

With reference to Part 11 of NZS4541:2013, sprinkler system shutdowns require the permission of the building owner and notification to the NZFS or their monitoring agent. Likewise, NZS4510:2008 requires the permission of the owner and notification to the NZFS. What is not mentioned in either of these documents is whether or not the local building authority should also be informed in the event of a significant shutdown. It could be argued that a significant shutdown has a material effect on the buildings compliance with the New Zealand Building Code and the basis of the original Certificate of Compliance.

Isolations need to be kept to a minimum. For example, sectional isolation valves should be utilised, rather than decommissioning a whole sprinkler system. Aon is aware of construction companies requesting whole floors be isolated during fit out work, even if the sprinkler system is not being altered. This is not prudent practice, especially given that the nature of construction work increases the probability of a fire.

Both NZS4541 and NZS4512- have requirements for sectional isolation tags or labels to be provided at the control valves or panel. This was incorporated into these standards following litigation that resulted after a fire occurred in a partially isolated installation which had not been reinstated after the construction project was completed.

There is a requirement in NZS4510 to progressively commission the fire hydrant system as it advances up the building (there is no similar requirement in NZS4541). Aon is supportive of contractors who wish to progressively commission a fire sprinkler system. Progressive commissioning of the fire hydrant and fire

Photo: Tim Cook

sprinkler systems aids the NZFS in the event of a fire, probably reduces the damage and increases the onsite safety of the construction workforce.

With respect to the fire described in the Stuff article referred to above, NZS4510 does not allow the riser system to be decommissioned until the contents of the building are removed.

It is beyond the scope of this article to discuss legal ramifications in the event of a financial loss, or loss of life, from a fire during construction. However, given the breadth of interpretation that can be applied to health and safety legislation and the wide nature of the tort of negligence, Aon cautions fire contractors to be very vigilant before carrying out significant system isolations and, if in doubt, to seek their own legal advice.

Finally, it is important to remember that those decommissioning parts of a fire protection system for significant periods need to be aware that any decommissioning could be deemed to be a material fact by the insurers of the building and its contents. When decommissioning a fire protection system you should therefore always notify the relevant insurance broker and/or insurance company to avoid any potential non-disclosure issues. Failure to follow the correct isolation procedure could result in claims issues and potential litigation should an untoward event occur.

The key message Aon wishes to convey is fire contractors need to carefully consider the basis for every shut down and actively question if shut downs are actually justified, as the risk, safety and legal implications can be significant.

FPANZ is proud to propose a combined all-day workshop...

Marketing Savvy & Digital Savvy

the marketing workshop that...

- Delivers skills to dramatically improve your marketing
- Clarifies your brand and your marketing plan
- Gives you insights into your audiences

the digital savvy workshop...

- Welcomes non digital natives
- Goes far beyond social media
- Dramatically improves your online marketing

Marketing Savvy gives people a fast-track introduction to marketing:

- Developing and positioning your brand.
- Understanding your audience, their perceptions of you, your product, your issues.
- The Conversion Formula - creating buyers from browsers.
- Selecting the right marketing options.
- Low-tech and low-cost marketing options.
- The marketing funnel.
- Creating marketing plans.
- Creating a great user experience - the ultimate marketing tactic.

Digital Savvy: the internet is not just a phase we're going through. Every organisation needs to get more from the possibilities the web offers. Other marketing options such as advertising, direct mail or events aren't effective without huge budgets. This workshop can revolutionise how you do business. The agenda includes:

- **Websites:** the heart of your online communications should be working harder for you - building your credibility, promoting you via Google, reducing administration and educating your audiences.
- **eMarketing:** email marketing is still more effective than social media. Build your databases and create emails that get opened.
- **Social media:** find the right platforms, content, tone and expectations. Consider Facebook advertising.
- **SEO:** the right ranking on Google for the right keywords is invaluable.

Follow-up: The workshop will be backed-up with comprehensive notes (100+ pages) and unlimited, on-demand coaching for 12 weeks.

hootville 
communications for good; not evil

Your Trainer...

Brett de Hoedt

FireNZ 2016 MC &
Speaker, & Self-proclaimed
mayor of Hootville.com

Journalist - turned - marketer **Brett de Hoedt** established Hootville Communications in 1999 and has worked with 700 + clients. He trains and consults on media, marketing and communications. Your training will be challenging and practical. Best of all, it will boost your business.

EXPRESS YOUR INTEREST TODAY!

Proposed dates are **July 20 or 21** Strictly limited numbers

Register expressions of interest to attend and we will confirm we have sufficient numbers to run the course

Normal Price is AU\$1100 however the FPA has negotiated a **substantial discount** and FPA, IFE or SFPE members will be able to attend for only

NZ\$650 per person

To express interest in this course, email: fpnz@fireprotection.org.nz

NEW ZEALAND

Contractors SIG Update

- Author **Kiran Soma** – Fire Protection Contractors SIG Chair

There has been some progress this year with regards to the FPA delivering to this SIG some meaningful initiatives. It was pleasing to see more participation from members this last meeting. Please feel welcome to contribute by phone, email if and where not able to attend our meetings.

The Fire Training Container Project

A transportable Sprinkler / Alarm training facility. Having done some initial work on this with respect to concept design, budget and deliverability of the item.

A budget was put forward to the FPA Board. the board is supportive of the concept, though requested further information with respect to cost, logistics, and utilisation. Having now thoroughly reviewed the issues, the SIG have decided to put on hold this initiative as it is felt the FIRE-101 industry entry training level initiative is more readily deliverable at this time.

FIRE-101 industry entry training:

This is aimed at new entrants to the industry. Possibly school leavers or those starting their careers in the fire industry. Initially, for end of 2017 a pilot scheme in Auckland. The aim of the course is to provide trainees a broad exposure to our industry sectors, ie Sprinkler, Alarm, Evac, Passive, Potable, Fire fighting, and fire engineering. The course is expected to be full time running for approx 4-6 weeks. Trainees upon completion of the course will be awarded an FPA NZ certification. Trainees will be monitored and encouraged to progress further into a specific sector of our industry. The FPA hope to make available a pathway for FIRE-101 certified trainees to forge a career with FPA members.

FPA is now administrating the listing of Sprinkler Contractors.

The FPA member list is published on our web site and newsletter. Given this responsibility, this SIG has outlined our member concerns with respect to listing criteria being strictly administered.

Poorly quantified applications will not be accepted as it is the FPA responsibility to maintain records of adequacy, and justify where required, listing or non listing of sprinkler contractors.

To ensure your organisation is appropriately listed, contact the FPA. We recommend you apply for relisting at least two month prior to renewal date.

Changes to NZS4541 (Fire Sprinkler System)

In light of upcoming changes. It is the intent of this SIG to provide our members better representation and interaction on the new standards committee. Kiran Soma has been appointed the Sprinkler Contractors representative on the standards committee. The mandate of the SIG delegate is to inform, and provide a conduit to and from SIG contractors. Streamline and ratify proposed changes prior to the public comment stage. Some work was done last year with respect to this. This SIG will be resuming this initiative. Thank you to those who registered their interest to represent the FPA SIG on the standards committee.

Changes to NZS4512 (Fire Alarm Systems, EWS)

This standard is in need for update. Unlike the sprinkler standard the funding is not readily available. On that basis the FPA has put forward a funding model which all parties appear to agree upon. Implementation of this funding model is expected to be in place by end of July 2017. A future update will be provided. Of major concern is that given the last update was 2010, new technology is now available, though technically not able to be implemented. Clarification from Standards NZ has been sought, though at this stage no guidance has been received.

– Kiran Soma

CHARTER UPDATE

Evacuation Consultants SIG Update

Author **Phil Jackson** - Evacuation Consultants SIG Chair

The presentations around Intelligent Emergency Lighting and Human Behaviour during Evacuation were both well received. Ruggiero Lovreglio delivered a very informative presentation which provoked many conversations amongst the Architects, Fire Engineers, Fire Risk Officers, Technicians and Evacuation Consultants who chose to attend. It was fantastic to see so many people involved in design and evacuation working together.

It is likely that Ruggiero will continue to work with us, and have an input to the Evacuation SIG, this will be valuable especially with Evacuation of High Rise Buildings, and the pending review of the Evacuation Regulations high on our agenda.

The NZFS Fire Information Unit is gearing up for the transition to Fire and Emergency New Zealand (FENZ)

from 1 July. There won't be any immediate impact on evacuation scheme regulations or processes, although a formal review of the Fire Safety and Evacuation of Buildings Regulations 2006 is expected to kick off shortly afterwards. The FENZ transition is also expected to bring new and different work from across the organisation into the FIU which will increase their workloads and may lead to slightly longer turnaround times for evacuation schemes, although still well within the 20 day regulatory timeframe.

If you have not received an invite to the next SIG meeting, and a copy of the agenda please email admin@fireprotection.org.nz

- Phil Jackson
Evacuation Consultants SIG Chair 2017

HOFFE SIG Update - Author **Steve Smith** - HOFFE SIG Chair

Halfway through the year already, sounds cliché, but this year seems to be racing by, and we have heaps to do!! As such, we would like to nail home a couple of projects.

At our May council meeting, one of our topics was the two HOFFE group Codes Of Practice, and as part of that exercise, the listed product register. We believe this will be a valuable tool that can assist us in dealing with some of the situations arising in our part of the industry. Funds raised from this may well go towards the cost of funding the NZS 4503 project, we are open to suggestions???

With investigations in our industry currently being carried out by both the Commerce Commission and Worksafe, we need to assist them where possible to ensure that both good standards of operation and public safety can be maintained. While we realise it is easier said than done, it would be nice for all concerned if we could get some resolution and move on.

So, when combined with our other projects, there is plenty to discuss at our June meeting. I look forward to hearing your feedback, especially on some of the positive initiatives we are looking to put in place.

- Steve Smith, HOFFE SIG Chair 2017

Event Schedule June - August 2017

31st June 2017	FPANZ Membership Year 2016/2017 Finishes	
1st July 2017	FPANZ Membership Year 2017/2018 Begins	
27th July 2017	Board/Council Meetings	
7th August 2017	Training Group SIG Meeting	Auckland
7th August 2017	HOFFE Group SIG Meeting	Auckland
8th August 2017	Passive Group SIG Meeting	Auckland
9th August 2017	Evac Group SIG Meeting	Auckland
10th August 2017	Inspection Group SIG Meeting	Auckland
11th August 2017	Contractors Group SIG Meeting	Auckland
11-13th October 2017	FireNZ Conference & Exhibition	Auckland

Passive Fire Protection SIG Update

- Author **Paul Ryan** - Passive Fire Protection SIG Chair

Rules are Rules!!!

This month's article relates to the ongoing confusion some parties have regarding exactly what standards are acceptable when it comes to compliance to acceptable solutions within the NZ building code.

- If the building being protected is a *new* build – the building code is quite clear. **All penetration seals must be assessed to AS 4072.1-2005 – no exceptions!**
- If the building is an *upgrade* – AS 4072.1 should be the standard requested in the first instance. But if there are no systems available assessed to that standard – we then need to consider other international tested systems such as EN 1366 or BS 476 parts 22 to arrive at a system that will provide the necessary passive fire protection.

One of the challenges we have in New Zealand is that we are a very small market when it comes to passive fire protection. The largest markets in the world are Europe and the USA – which follow the EN and ASTM standards.

We follow the AS standard – which in many instances is very close to the EN standard – so many products in the NZ market that are AS 4072.1 compliant were born out of EN testing.

ASTM testing is very different to AS or EN – so cant be assessed to AS 4072.1-2005 easily!

This, however, doesn't mean EN 1366 – by default – now becomes an acceptable test standard in our country. The manufacturer or supplier **must** still have the EN tested system assessed to AS 4072.1-2005 to be building code compliant.

This might sound great news that our small market can benefit for the many systems already tested in Europe, sadly not!

New Zealand not only suffers because it is small in size – so lacking the commercial attraction many international manufacturers look for prior to investing in costly fire testing – here in New Zealand – we build very differently to most other markets.

For instance, in most parts of the world they build 60-minute fire rated walls, using two layers of 12.5 or 13mm plasterboard. It is common in New Zealand to build with just one!

Many insulate fire walls internationally use stonewool, but this is not common here in New Zealand! This dramatically reduces the number of EN tested systems available for assessment over to AS 4072.1-2005!

Builders and designers need to ensure that whatever system is being installed, it is assessed to AS 4072.1 -2005 and installed as per the test document.

Most of the problems we see on-site are due to builders having to go back over the project and adjust opening sizes, number of services passing through the fire seal, or in some cases – replacing the product due to the lack of AS 4072.1 – 2005 supporting test data!

With the launch of the FPANZ Passive Product Register just weeks away, this will help to locate the correct code compliant product, identify how it was tested and installed – leading to more cost effective passive fire protection in New Zealand!

- Paul Ryan

Passive Fire Protection SIG Chair 2017

Sprinkler Contractors Listing Formalized Agreement

- Author **Chris Mak** - Aon New Zealand

Aon is pleased to announce that it has formalized an agreement that its Sprinkler Contractors Listing Scheme will now be managed by the Fire Protection Association of New Zealand. In conjunction with the Association, Aon is aiming at applying a higher level of rigor to the listing scheme, and place a greater emphasis of ensuring that contractors aim at ensuring that installations are correctly certified.

New listing application forms will be available in due course. In the interim, the previous forms should be used, with submissions copied to both **NZ.SSC@Aon.com** and **FPANZ@fireprotection.org.nz**

Training SIG Update

- Author **Trent Fearnley**- Training SIG Chair

Kia ora koutou,

The training SIG had our third meeting on 10th June. A lot of research had been done between the 2nd and 3rd meetings. There were 3 main items that were brought to this meeting from that research:

1. I was invited to a meeting with E2E (Education 2 Employment) Engineering which is a part of the Tertiary Education Commission. They are tasked to increase the number of engineers in the county by 500 people each year. They have achieved this last year but they are over subscribed in the degree level and above. They are not achieving the required numbers in the Engineering Technician level. We explained that we had a lot of people in this space in the fire industry but they either had no formal engineering qualifications or related qualifications, however they had a vast amount of industry knowledge. we discussed the multiple reasons as to why a qualification for this group of people was essential and they agreed. From their point they are wanting to push for a Diploma in Engineering - Fire Engineering. The target audience initially would be those already in the field but with no qualifications. Areas such as IQP's, Building Officials, Fire Systems Designers, Fire Engineering Technicians and Fire Risk Management Officers. We are now following up the possibility of developing such a course with potential Institutes of Technologies.
2. The second meeting was with the Ministry of Social Development which Scott had. This was to discuss the possibility of assisting school leavers/unemployed persons to find work in the fire industry. This may seem an easy task for the Ministry as we do have a shortage of people in the fire industry but we do want quality people though. In order for the this to be of any benefit to us those people would require some initial training and an introduction to the industry. This would tie in with the work that we were planning for with the schools pathway projects.
3. Lastly Michael James and I, along with many others in the industry, were part of a survey carried out in 2015/2016 about the Construction and Infrastructure industry in New Zealand. The focus was on how the New Zealand construction and infrastructure industry is labour intensive and is dependent on the availability of skilled labour to meet demand and maintain quality. Therefore, it is critical that careers in these industries are identifiable and attractive to job seekers. It was identified that, while there are multiple entry points to the industry, there was no overarching plan or map detailing the range of roles or the career pathways throughout the industry. As you can see from there work it is a mirror of the fire industry which was a sub group of this work. So it is up to us to change this to make it an attractable career pathway.

The above was brought to the meeting and discussed at length. The outcome from the meeting was that we not have 2 goals. One short term and one medium and one term goal. They are the as follows:

Short Term Goal

To develop an introduction to the Fire Industry program. This will be a short course possibly 1 or 2 days where people are given a brief insight into what the fire industry is and where it could lead you in the various fields. This will be then followed by a 'Fire 101' course which will be a more detailed course on basic fire knowledge and touch on more detail of what each discipline in the fire industry does and has some practical aspect of it too. It will also include some health and safety training. This could be anywhere from 4-6 weeks. This will hopefully eliminate those that are not interested and also identify those that are keen but could benefit from some additional learning prior to taking on an apprenticeship possibly. Following that course we will hold an interview day where our members can then interview those that successfully passed the course and hopefully offer them employment.

This will be then promoted as part of our careers day at FireNZ with the introduction course to follow shortly afterwards. We would then like to start the 4-6 week course in early November so that the interviews could be had prior to Christmas with start dates in the New Year as an example. For this to be successful we need the support of industry and members to help with employment opportunities and also to provide information to your SIG chairs or me as to what you would like to see in our 4-6 week course.

Medium Term Goal

To develop a Diploma in Engineering - Fire Engineering. There are courses overseas already and some of the subjects are currently are been covered in NZ under NZQA but in other courses. This could realistically be developed with in a year ready for deployment to those already in the industry.

Long Term Goal

To be part of the Ministry of Education Pathways program in schools. In order to be part of this we must have a recognised pathway with a developed course of progression from school leaver through to Masters. We already have through Competenz some Level 3 and 4 certificate courses and we will assist them in developing some core subjects to get a Level 4 in Fire Science. Once the Diploma is completed we will then have industry

Continued overleaf...

Training SIG Update continued...

bench marks for entry into different level of the fire industry and thus creating a defined pathway. Hopefully then we can sign up for the Pathways program. Details on this though are still being worked through.

Our 3 meetings to date have been very constructive and as you can see we have now developed some goals and which I believe are very achievable. With your support I think we can get them across the line.

Ki te kahore he whakakitenga ka ngaro te iwi
Without foresight or vision the people will be lost
 Nga mihi,

– Trent Fearnley
 Training SIG Chair 2017

FPANZ Team-Up Calendar

We now have a great online calendar system for keeping an eye on events that are relevant to our industry and FPANZ. This can be accessed a number of ways, from our website, or from the link below, or you can even subscribe to the ical links below and your own calendar will be updated with the events and changes if you subscribe to them. Presently we have four calendars the web address to view them online is:

THE BEGINNING OF A NEW ERA

11TH – 13TH OCTOBER 2017
 GREENLANE • AUCKLAND

  

THE FORUM OF FIRE PROTECTION, FIRE SAFETY AND FIRE ENGINEERING PROFESSIONALS

Phil Jackson

- Evacuation Consultants SIG Chair 2017

I am a Fire Safety and Evacuation Advisor working within the health sector, specialising in design and delivery of robust training programs tailored to the needs of my clients across a variety of platforms. I have a substantial background and proven track record in risk and hazard management.

As a certified Fire Evacuation Consultant and Licensed Security Consultant, I make recommendations for the legislative safety compliance of new buildings as well as improvements to existing structures in order to reduce organisational safety risk, the associated financial loss and promote a culture of preparedness. My involvement in the content and presentation of an award-winning fire response focused eLearning package had resulted in an increased staff uptake of 428%

To support my current delivery, I bring the transferable skills expected from a career with the UK police force,

NZ Private Investigation and the security industry. These skills include the ability to communicate clearly, using active listening and a solutions focused approach. I am experienced in providing operational intervention to large corporates, and providing pivotal support and advice to operations that have attracted or have the risk of attracting media attention. I have worked to prevent disruption from issue motivated groups, ensuring companies can continue to operate safely.

Being recognised as a team motivator, I have the confidence and ability to react quickly to situations and implement procedure, whilst training staff to operate to the highest standards.

FPIS Long Service Awards

Fire Protection Inspection Services Limited (FPIS) would like to recognise two long service awards of 21 years' service in the inspection of active fire systems and contribution to the industry of ensuring the compliance of our fire protection systems to the relevant New Zealand Standards.

Dave McDonald joined FPIS in April of 1996, and in his time would have inspected thousands of fire alarms systems throughout his tenure at FPIS. He is well respected within the industry and has cemented long term relationships with his clients. Personally, if you ever want to have a conversation about something, go with Dave, as he is well known to hold a good conversation.

"Dave has been doing Guardian Auckland's inspections for as long as I have been here which is 20 years. We have been to hundreds of sites with Dave over the years and got to know him well

and had plenty of laughs along the way. Guardian has a policy of achieving a 100% pass rate, we don't always get there and Dave sets high standards so we know our installations have to be top notch to get the coveted inspection sheet with the all-important "Nil" in Dave's famous barely legible hand writing. (he should have been a Doctor with writing like that) It's certainly helped me and my staff to turn out a high quality installations knowing Dave will be running his eye over it so we have him to thank in part for the quality of our workmanship. Dave is famous for not missing anything and the techs know it. Because Dave has been around so long he is a fountain of knowledge in the latest and previous versions of the standards and has always been happy to take calls from me and my staff and lots of other people in the industry with curly questions, (and probably lots of dumb questions) on the standard. This has been a great help having someone with Daves knowledge to call on."

FPIS
Fire Protection
Inspection Services

Jeff Baker joined FPIS in June of 1996, and has been inspecting and testing sprinkler systems for FPIS throughout the last 21 years including some of New Zealand's major infrastructural sites. Jeff is based in Christchurch, and has been a very diligent, consistent employee of FPIS throughout his tenure. Jeff is always keen to express his opinion on things, and will study things in-depth including his analysis of the best utility vehicle in New Zealand.

Calling all Halon Fire Extinguisher Owners

FPANZ is promoting awareness around Halon fire extinguishers and wants to recover these from the commercial sector and from private owners.

Halon has fallen out of favour due to its environmental impact and long atmospheric life time. It is considered to be a potent greenhouse gas and contributes to ozone depletion. However, safety is the main issue as servicing of Halon extinguishers has not been available since 1998 when the production of Halon was banned under the Montreal Protocol.

Over the previous ten years, more than 60 tonne of Halon has been recovered by FPANZ members and this was sent for safe destruction. It is estimated that a further five to ten tonne is still in use. This needs to be recovered now as any unit still in use will be well over ten years old and will not have been serviced.

“Fire extinguishers, just like smoke detectors, need to be checked by a certified agent annually” says Blind

“We do have fears that Halon extinguishers, due to this lack of servicing, may fail to operate correctly in the event of a fire. We are prompting all members of the public to check their boats, cars, workshops, caravans and planes to see if they still have a yellow Halon extinguisher and to exchange this for a unit coloured red”.

“There will be a cost to change, however both the public and the environment will benefit as we can be sure new systems will operate correctly in event of a fire and the impact on the ozone layer will also be reduced” says Blind.

There are now many suitable and cleaner alternatives available and FPANZ members located nationwide will accept Halon units and provide information on the safer alternatives available. Halon extinguishers are easy to identify as they are bright yellow. Replacement units will be coloured red.

“We look forward to gathering as many of the remaining Halon systems and hand held fire extinguishers here in New Zealand and to have the contents safely destroyed” says Blind.

“We will also have greater confidence that owners will be protected in the event of a fire and this will ultimately protect lives”.

Our message is: **“Be Safe Yellow is Out – Red is In!”**

For further information check the FPANZ website for a certified agent near you:

<http://www.fireprotection.org.nz/>

Yellow extinguishers, Halon extinguishers, are so old – if you have one, the chances are they will let you or your family down in a fire.

Halon damages the ozone layer which in turn can affect our health, causing skin cancer, cataracts and other illness as well. Damaging the ozone layer can also impact on our weather, our soil and our crops.

Protect yourself, your family or business, by handing in your old yellow extinguisher. It's easy to do – simply take it to the nearest local approved Fire Extinguisher Service Agent. A list can be found at www.fireprotection.org.nz

YELLOW IS OUT
RED IS IN

While there, talk to these experts about your needs and how best to protect against fire, including alternatives such as a red fire extinguisher*, a fire blanket, a smoke alarm, and other effective choices. Often a combination is the best approach.

So act now and hand in your old yellow extinguisher. It's a service for the general public and small businesses. A small recovery charge will be set at \$10 per kilogram (up to a maximum extinguisher weight of 2.1 kg in size). A Halon extinguisher larger than 2.1kg is considered a commercial size and will be disposed of at a quoted rate.

**There is more than one type of red fire extinguisher on the market. Ask which one best suits your needs.*

FIRE SAFETY DESIGN

An introductory course on Fire Safety in buildings.

SARC224

Compliance with Fire Safety provisions of the New Zealand Building Code affects layouts, building separations, building services, external windows & walls, and surface finishes.

- ◆ Available by distance learning with two one-day attendances in Wellington
- ◆ Suitable for individuals managing Fire Protection Contracts and Fire Protection System Designers, who want to learn and understand better how their systems fit into overall Fire Engineering and Building Design.
- ◆ Basic principles of design to ensure the safety of people in buildings during a fire. The implications for building form, layout and interiors on escape route design, statutory requirements, and alternative solutions as means of compliance.
- ◆ Domestic Fees: \$931.50
- ◆ see also: <http://www.victoria.ac.nz/courses/sarc/224/2017/offering?crn=18394>

Lecturer: Dr Geoff Thomas

Geoff has a PhD in fire engineering and as well as teaching and researching in fire safety is a Chartered Professional Engineer in fire engineering with over 15 years fire

Enrol by 21 June for Trimester 2*
Term dates 17 July-20 October

*late fees apply after this date
