

Industry Update

› SEPTEMBER 2021 ISSUE

WELCOME

Welcome to September's newsletter.

It is pleasing to see that New Zealand has managed to move down alert levels since last month's newsletter. This reduction in levels has at least allowed the construction sector in Auckland to start up again. Unfortunately, the news isn't all good, as some sectors within the fire protection industry, such as evacuation consultants, remain unable to operate under level 3. It's clear that there are still uncertain times ahead, and this will have a wide and ongoing flow-on effect to all sectors until we hit the number of vaccinations required by government. We continue to correspond with MBIE to advocate on behalf of members not only about the impact on our members but also the safety of the public and buildings while we continue to go in and out of alert levels.

Scott Lawson

FireNZ Update

Since the last newsletter, and as many of you now know, the FireNZ committee made the difficult decision to cancel FireNZ 2021. As we represent an industry with core values around the safety of the community, the FireNZ committee was unanimous that the decision to cancel was in the best interests of all parties. Cancelling FireNZ also protects the investment of our exhibitors and delegates and ensures we can move on with planning FireNZ 2022. At this stage, we do not have new dates for FireNZ as our priority was to provide this information as quickly as possible to affected parties. In the near future, we will seek to lock in the venue and dates for FireNZ 2022.

HOFFE Group

We are currently reviewing and seeking input from our members on NZS 4503 Hand operated fire-fighting equipment. This standard has not been updated since 2005 and is well overdue for a review and update. We now want to formalise a working group of members and other stakeholders from outside FPANZ to help review it and suggest what changes might be needed. With this in mind, we are seeking service companies to be part of this group as they are more affected by any possible changes. If you wish to be involved, please email info@fpanz.org so we can send you updates on progress and to any planned strategy meetings.

Coatings Code of Practice Review

The coatings working group started a review process a few months ago and invited stakeholders to comment on areas that needed to be reviewed. We had some great feedback on this, and the working group have

held their first meeting to review and work through all of the public comments to continue to improve the document. Overall, the feedback was very supportive of the document, as was the uptake in referencing the document since its launch in early 2020. It is great to see this document going through a formal review process to ensure it remains current and continues to evolve and improve. I would like to thank both the original working group and those now involved with the review and update process.

FPANZ PLATINUM MEMBERS

'Get it Right' Seminars

Given that events are harder to plan and prone to cancellation, we are ensuring that all future seminars have revised criteria for running. We will still aim for face-to-face training and hope to have our next batch of seminars underway in November. To minimise the risk to those attending, we always ensure we follow all Ministry of Health guidelines for events. In some cases, we will hold smaller sessions or seek larger venues but keep the number of attendees lower. We also offer full refunds or credits so attendees will not be out of pocket if an event gets postponed or cancelled at the last minute. We have some great seminars coming up, so keep an eye out for dates and topics in the upcoming newsletters.

New Members

It would like to welcome the following new provisional members to the association and hope they will join some of our special interest groups and working groups.

» Firetree Ltd

Until next month's newsletter, keep safe and let's all do our part to keep moving down alert levels so we can get our industry moving.

Regards, **Scott Lawson**
Chief Executive Officer, FPANZ

Use of FPANZ Logo

Recently we have noticed that some of our FPANZ members (and even non-members) have been incorrectly using our FPA trademarked corporate logo. This logo is not to be used by any entity without the written permission of the Chief Executive Officer and/or FPANZ Board. The purpose of this logo is to provide a corporate identity for the Association in its general course of business activities.

The FPANZ membership tier status logos shown below are licensed to be used by any financial member of FPANZ who has signed up to the FPANZ Code of Ethical Conduct and is fully compliant with all its requirements.

For a list of logo guidelines please visit our website <http://www.fireprotection.org.nz/about-us/logos>.

If you are using an incorrect logo and would like to request a membership logo for use, please email info@fpanz.org 

If you are not an FPANZ member and have not gained written permission to use the FPA logo, then we ask that you remove it from your website, email signature or anywhere else that it is currently being used.

HOFFE SIG Update

» Author **Steve Smith** – HOFFE SIG Chair

Hi everyone, I hope your month has gone as well as our All Blacks – who after dominating the competition and securing the rugby championship, have struggled to another win against the Springboks during the weekend.

As a sign of the times, our September HOFFE group meeting was a Zoom meeting which gave us the ability to have the meeting under, what for many of us, are level 3 COVID conditions. It was pleasing to have a couple of new members join us for the group meeting. There were also commitments given from other fire equipment companies who want to be part of the group.

Given that the review of our core document NZS4503:2005 is currently progressing through the process, having greater representation in our group is very important. Our position statement is currently through for final review which also now includes a statement against the practice of removing fire extinguishers from commercial premises.

Our next HOFFE group meeting is on the 25th November.

Kind regards,

Steve Smith,
HOFFE SIG Chair 2021/2022

Recent Determinations

MBIE have published two determinations, which impact on the fire protection industry.

2020/029: Regarding the issue of a notice to fix for building work to a sprinkler system carried out without a building consent

The first covers work carried out to partially strip out a sprinkler system, which was designed to ordinary hazard group 3 criteria. After the work was completed, the area was protected by concealed space protection, to extra light hazard criteria.

2017/023: Compliance of the substitution of automatic fire sprinkler systems for heat detectors in a basement carpark

This determination agreed that substituting a sprinkler system within a car park that was required to have a type 3 thermal detection system was acceptable.

Evacuation Consultants SIG Update

› Author **Phil Jackson** – Evacuation Consultants SIG Chair

I am pleased to announce that the updated code of practice for evacuation has been signed off by FPANZ, and will be available soon via the new look website.

As the country continues to operate under increased alert levels, a reminder that drills are not required to be completed whilst there are social distancing requirements in place.

The subject of evacuation lifts is being raised more frequently, during our last SIG meeting we also touched on this subject, with discussion around how this could interface with fire-fighter requirements. Another discussion point was around who could be trained as a reliable operator of this equipment and how occupants could be managed.

Our last meeting of the year is scheduled for November, don't forget to add this to your diary, and forward any queries you may have in the meantime.

Regards,

Phil Jackson

Evacuation Consultants SIG Chair 2021/2022

Changes to Regulations on Trial Evacuations and Training Programmes

(Fire and Emergency New Zealand (COVID-19—Fire Safety, Evacuation Procedures, and Evacuation Schemes) Amendment Regulations (No 2) 2020)

The requirement for building owners to conduct trial evacuations or evacuation training programmes will be reinstated from next Monday, 1 February 2021, provided there are no physical distancing requirements in place for the area in which the building is located. Specific exclusions have been included in the changes to accommodate those buildings which are in use as Managed Isolation and Quarantine Facilities.

Building owners are not expected to resume trial evacuations or evacuation training programmes immediately the changes come into force. To work out when the next trial evacuation or training programme notification is due, you calculate a 6-month period that excludes the time from 25 March 2020 to 31 January 2021.

This means, for example, if a building was due to have a trial evacuation conducted by 10 April, 17 days after the suspension began, there will be a requirement to conduct a trial 17 days after the changes take effect which will mean 17 February 2021. This is provided there are no physical distancing requirements in force.

If you have any questions, please contact the Fire Information Unit on 0800 347 346 or email fireinfo@fireandemergency.nz

Passive Fire Protection SIG Update

Author **Justin McEntyre** – Passive Fire Protection SIG Chair

DON'T SHOOT THE GOOD ONES

Firstly I'd like to make a huge thanks to all of our colleagues from Auckland that took one for the team by committing to the extended Level 4 lockdown. We welcome you back into the workforce and hope to see you dropping down the Alert levels soon.

In 2021 there are a handful of great Passive Fire companies around NZ that are well supported by Training, Manufacturer Technical support and good QA processes and have suitably capable & competent Site staff and Supervisors.

However, unfortunately I'm still hearing war stories from Good contractors that are being put to the axe on projects by Third Party Inspectors and Engineers.

Oversight and inspection is an important part of our industry and has played a big part in rectifying the issues that once plagued the industry. So too has good contractors that have invested huge amounts of time & money into raising the bar including training staff.

It is disheartening to hear stories whereby Third Party inspectors, Engineers are taking a "Point scoring" approach. This approach is not best for client or best for project, nor does it contribute positively to the compliance of the building. It befuddles me as to why this is how someone would chose to spend their working life taking this approach.

The role of inspections is to ensure compliance with NZBC is achieved, compliance with the consented design is achieved and this will require a certain level of interrogation. However, the level of interrogation needs to be appropriate.

SFPE have recently released a well-considered guide to Construction Monitoring. I would encourage everyone to take time to digest this document and look to put into practice. Available here <https://files.customadmin.co.nz/sfpe.customadmin.co.nz/SFPENZ%20Construction%20Monitoring%20Guide%20V1.0.pdf>

As I've said in the past the first point of interrogation on a project should occur prior to installations and should be at the outset when you ask questions of the Passive Fire Installer, find out their QA systems and competencies. This is also the opportune time to set the expectations you have for the project including inspection levels, reporting levels and the like. It will most likely mean the remainder of the build is harmonious which can only be a good thing.

It is very likely that the Passive Fire Contractor is the person/ company on the build that has the highest level of knowledge of Passive Fire Protection and most probably the person/ company that is actually trying to achieve the same goal as the Third Party; which is compliance. So why beat them up if they are performing up to standard?

There are some very experienced Third Party inspectors that have a lot to offer clients and projects. But not all are equal in their approaches to projects which has created inconsistency & utter frustration.

I feel it is important we as an industry now work together to put in place parameters around Third Party Inspection and aim for consistency that everyone can work to and abide by.

Because if we don't I'm sad to say that the industry is going to start losing some of the Good ones.

Kind Regards,

Justin McEntyre

Passive Fire Protection SIG Chair 2021/2022

Safety Alert – Fire Suppression System Electro-Explosive Actuators

Author: FPANZ Team

There are many ways that fire suppression systems and their components can cause serious injury, or even kill you. Gaseous suppression (“Gas flood”) systems and dry powder suppression systems utilise highly pressurised gases, powders, or liquids and, in some cases, explosive actuators to initiate discharge of these systems.

This article is a timely reminder about just one of those aspects that make fire suppression systems so dangerous to work on if you are not fully trained and competent...

BACKGROUND:

Most fire suppression systems require an electrically-actuated method to release the suppression agent from the cylinders.

The latest generation of systems mostly use (resettable) solenoid actuators for this task. However, historical systems commonly used one-shot electro-explosive actuators.

Electro-explosive actuators are known by many names: protractor, pyrotechnic actuator, squib actuator, cartridge actuator, explosive actuator, detonator. They all contain an explosive charge that when electrically detonated can, in some instances, turn the unit into a shrapnel-emitting projectile if it is not contained by a cylinder. See the photos below for just a few examples.

LOCAL INCIDENT AND ITS OUTCOME:

(This serious harm incident could easily have been fatal.)

A fire protection worker was recently asked to decommission two gas flood systems, leaving the gas cylinders in place for future disposal.

The gas flood control panels were down-powered and removed. To reduce the risk of accidental discharge, the worker also removed what he believed to be the gas release solenoids from the cylinders. However, these were actually explosive actuators.

CONTINUED NEXT PAGE...

Safety Alert – Fire Suppression System Electro-Explosive Actuators *continued*

The system owner had given permission for the gas flood control equipment to be removed from site to be used for servicing and possibly training. This included what were thought to be gas release solenoids but were actually explosive actuators.

At a later stage, in his home workshop, the worker sought to demonstrate the workings of a “gas release solenoid” to a family member and connected a battery to the device, which resulted in a substantial explosion.

He suffered lacerations to the face, a significant blunt force injury to the stomach, and a significant hole in his arm where shrapnel from the explosion penetrated his body. He was admitted to hospital for 1.5 days and required surgery to remove the shrapnel from his arm.

FPANZ is aware of other near-miss incidents that have occurred where untrained staff have worked on gas flood systems. We are also aware of an installation that was recently installed by a non-member, that, had it been activated, could have caused injury or death due to poor quality workmanship and inadequately rated pipe materials. The owner of this facility elected to decommission the new system, due to the costs involved in rectifying the installation.

SUMMARY OF LESSONS TO TAKE AWAY:

- › Fire suppression systems, both historical and new, can include explosive actuators instead of solenoid actuators.
- › If triggered when uncontained by a cylinder head, explosive actuators have the potential to cause serious injury, or even death.
- › Explosive actuators do not typically have any labelling to indicate the presence of explosive material – you have to know and recognise what they are.
- › There are many ways that fire suppression system components can cause serious injury or harm if incorrectly handled. Staff working on such systems need to be fully trained to identify these hazards and take appropriate measures to avoid them.
- › Assumptions are risky and potentially dangerous. If in doubt, ask.
- › If you are not trained in the installation or servicing of the specific system you are asked to work on, then do not work on it and seek advice.
- › The FPA *Code of Practice for Gaseous Suppression Systems* should be reviewed by all staff working on gas flood systems.
- › Training on fire suppression systems is very specific and varies from manufacturer to manufacturer.

ACKNOWLEDGEMENT: *FPANZ acknowledges, with gratitude, the management and staff of the company that experienced this incident. Rather than keeping it quiet, they voluntarily supplied this detail so that the wider industry can benefit from their hard experience. Thank you.*

Targeted voluntary COVID-19 testing for building and construction workers

» Author: **The Building Performance Team**

The Ministry of Health is undertaking targeted COVID-19 surveillance testing in Auckland in order to provide a level of assurance that there is a low risk of undetected community transmission prior to movement to Alert Level 2.

Given the increased movement as employees return to work, and people are able to visit these businesses (even in a contactless way), the Ministry of Health is asking businesses to support voluntary surveillance testing of their workers.

The particular areas of focus for this voluntary testing are the **construction, hospitality, and retail sectors**, who have returned to face to face work.

It is important to note the following:

- » Testing is not mandatory, but the Ministry of Health is encouraging employers to support their workers to undertake this testing while we are in Alert Level 3.
- » As this is a surveillance test, workers who choose to be tested do not need to isolate, unless they have symptoms.
- » Surveillance testing consists of one nasopharyngeal or oropharyngeal/nostril swab taken, and a single follow up test in the following week (at least five days later) if we are still in Alert Level 3.
- » The swab test is free, it is up to employers on what arrangements they make with their workers who choose to undergo this testing.
- » Workers already being tested (crossing the alert level boundary, border workers, etc) should not undergo additional testing.

Businesses wishing to support worker surveillance testing can encourage their workers to book and get tested at a community testing centre, GP or urgent care centre. There is no workplace testing proposed at this point. Click the button below to find your nearest testing location.

[Click here to find a testing location near you](#)

Stay safe, and look after each other.

Ngā mihi,

The Building Performance Team
