WELCOME

Welcome to March's newsletter.

The year is racing past, and we have already hit the quarter-way mark. In this month's update, I want to address questions I have been fielding about continued professional development (CPD) and what this means for our industry.

CPD is a requirement in almost all sectors and ours is a life safety sector so who could argue that it shouldn't be a requirement? Without firm regulation of who can operate in the fire protection industry, we need to drive this ourselves. We have some very strong industry support for this, and many companies commit to training their staff, putting them through qualifications, and then following up with ongoing development. As the peak membership body for our industry, we support and encourage this and want to see all members do more in this space.

Even reading this newsletter can count towards CPD. Why, you may ask? Well, the topics covered are important to people working in the industry, we often publish details of product issues or information such as formal interpretations and updates from other important stakeholders that technicians need to be aware of. So, please take the time to make sure these topics are discussed at toolbox meetings or a copy of the newsletter is left in the lunchroom. Better still, register your staff to get the newsletter automatically each month. Actively enrol your staff in training, be it with suppliers, in-house training, or external training, and — even more importantly — make sure it's documented and recorded accurately. Certifying bodies such as councils often ask us to verify that people have attended our training and seminars for things like IQP renewals.

FireNZ

We are pleased to announce that FireNZ 2024 will have a revised format. Importantly, we have shifted to a soft launch, with the site visits, workshops, and a midday launch of the

trade show on the first day. This means that transport problems and other unforeseen delays can be accommodated so people are less likely to miss the main launch and international keynote speakers.

At the time of writing, we have already sold nearly 50% of the exhibition stands and sponsorship options, all in less than a week. I encourage our regular exhibitors to get in quick to ensure you have sufficient options for displaying at New Zealand's premier fire industry event.

We also have a great new layout for the trade show and a product showcase theatre. We will have an ongoing series of product presentations, CPD events, and new product launches throughout the conference. Make sure you check out the programme, which will be published before the event so you can see what products and suppliers you want to visit. You will be able to claim CPD hours by registering to attend these free events and visiting the trade show. Remember we don't charge to attend the trade show, so send your staff.

Water Supplies in Wellington

This month, Chris Mak and I met with Wellington water to discuss concerns from members in this region about reductions in supplies and water pressure. As many of you know, the failing infrastructure that Wellington Water must deal with is no secret, and in fact reflects the situation for many other water supply organisations around New Zealand. We advised of the implications of reducing water pressure and towns main supply for both existing systems and the design of new sprinkler systems. We now have a direct communications channel to Wellington Water, so we can address any specific concerns and see whether anything can be done in specific locations under their control.

This situation is also obviously similar elsewhere around New Zealand, so we continue to engage with other providers and will keep members advised of the outcomes. Please feel free to reach out to us or the sprinkler system certifier.

Fire Alarms "Get it Right" Seminars: Additional Dates

We have seen great demand for the NZS 4512:2021 fire alarms refresher training, so we have added two more dates in July. Now that the new standard is increasingly being specified, your staff need to know how it differs from previous versions to avoid mistakes. The additional date in Tauranga is Wednesday 10 July, and the additional date in Auckland is Thursday 11 July. These are already filling up quickly, so don't miss out. The registration form can be found here: https://www.fpanz.org/events/get-it-right-seminars

Sprinkler System Certifiers – Q1 Update

Aon have provided a quarterly update, including:

- fire brigade attendance points
- safety in design
- extra high hazard design tables
-) institutional heads
-) diesel fuel bug
-) storage declaration forms.

The full update can be found on pages 11-12.

COMMENTARY cont.

Membership

I would like to congratulate the following companies, who move from provisional to full membership this month:

- Watertank Inspections Ltd
- Consol Construction Solutions Ltd.

In closing, I encourage us all to embrace a more active role as members in a specialist life safety industry and consider how we can share knowledge and technical information, embrace ongoing training, and continue to raise standards in the industry. We also need to ensure that staff are retained in times of lighter workloads or downturns in the construction sector, as we know upswings in the economy mean we go from too many staff to having difficulty finding enough trained and qualified people.

Until next month,

Scott Lawson
Chief Executive Officer, FPANZ

THE FORUM OF FIRE PROTECTION, FIRE SAFETY AND FIRE ENGINEERING PROFESSIONALS

RYANFIRE RYANNIESH

Open State / Vented Cavity Barrier

The only AS1530.4 –2014 tested open state / vented cavity barrier in New Zealand

- Immediate activation products tested to TDG19
 standard stipulates they can remain open to fire spread
 for up to 5 min before full activation
- Tested when fixed to concrete / timber framing
- Tested horizontally and vertically
- FRR (fire resistance rating) up to -/120/120
- Tested up to a 100mm wide void

Call RYANFIRE today for more info or check out

KEYNOTE SPEAKERS

First Release

Dame Judith Hackitt FREng FIChemE

Independent Adviser to the UK Government on Fire Safety

A chemical engineer who has spent more than 20 years in the chemical industry. A former President of The Institution of Chemical Engineers and a Fellow of the Royal Academy of Engineering.

Throughout her career she has championed the importance of engineering in delivering solutions which benefit society. She cares deeply about safety in the workplace and more broadly.

From 2007 to 2016 she was Chair of the UK Health & Safety Executive and in 2017 conducted an independent review for the UK government into building regulations and fire safety in the wake of the Grenfell Tower tragedy. Her recommendations for radical reform received Royal Assent in the Building Safety Act 2022. In January 2024 she was appointed interim Chair of the UK Office for Nuclear Regulation.

Dr Wojciech Węgrzyński Prof. ITB

Head of Fire Automation, Smoke Control and Signalling, Building Research Institute (ITB)

Dr Wojciech Węgrzyński is with ITB, that is the Polish Building Research Institute in Warsaw. He currently holds the position of the Deputy Head of Fire Research Department and the Professor of the Institute, and a Director at SFPE Europe.

He is an Author of 40 peer-reviewed papers published in all of the primary FSE journals. His main area of interest is the fundamentals of compartment fire dynamics and standardized fire testing, and also: use of computational fluid dynamics in fire, wind and fire interaction and evaluation of the effects of the spread of smoke in buildings. His research is focused on the impact of the architectural context of the building on the smoke control performance, as well as finding solutions to make the smoke exhaust systems cheaper and more efficient.

Member of the MAC and Vice-Chair of Sub-committee for Research of the IAFSS. 2018 NFPA Harry C. Bigglestone Award Recipient; 2019 Jack Watts Award Recipient; 2020 SFPE 5 Under 35 Award Recipient. Member of Editorial Board of 'Fire Technology. Hosts a fire podcast at www.firescienceshow.com

KEYNOTE SPEAKERS

First Release

Hayley Burgess CFIOSH MIFITEE C.BuildE MCABE MSc Managing Director, HSBC Ltd

Hayley Burgess is a distinguished leader in fire safety and health, currently serving as the Managing Director of HBSC Ltd. Notably, she holds the esteemed position of being the first woman elected as the International President of the Institution of Fire Engineers.

With extensive credentials as a Chartered Health & Safety Practitioner and Chartered Building Engineer, Hayley boasts over a decade of pivotal experience in consultancy.

Over her illustrious career, spanning 12 years as a Principal Fire Safety & Health and Safety Consultant, Hayley has refined her expertise through engagements in both private consultancy and local government sectors. Her early work conducting Fire Risk Assessments for government-occupied buildings laid a solid foundation for her subsequent endeavors.

Presently, Hayley leads projects with a diverse clientele, specializing in the development of Fire Strategy Designs, comprehensive Fire Risk Assessments, and Fire Safety Inspections. Her consultancy services cover a broad range of fire safety aspects, reflecting her unwavering commitment to upholding stringent safety standards. Hayley's particular focus lies within the Social Care Sector, where she offers invaluable guidance to clients in navigating complex Fire Safety Standards, including the NIHTM 84 framework. Her keen understanding of the sector's nuances has positioned her as a trusted advisor in fortifying fire safety protocols.

In her capacity as a Chartered Safety and Health Professional (CFIOSH), Hayley brings a wealth of knowledge to her role as the Chair of the Northern Ireland IOSH Branch. Her leadership underscores her dedication to advancing safety practices and fostering professional collaboration within the community.

Beyond her organizational commitments, Hayley actively contributes to the field as a member of the Fire Expert Panel for Collaborative Reporting for Safer Structures UK (CROSS UK). Her involvement underscores her commitment to promoting safer structures and sharing insights for the benefit of the broader safety community.

DISCLAIMER: All FireNZ schedules, timings, speakers, and program content are subject to possible changes. We reserve the right to change, delete or modify due to operational and/or speaker availability. The most recent details will be on our website should any changes be required.

TĀKINA, WELLINGTON 23-25 OCTOBER 2024

HOFFE SIG Update

Authors Steve Smith & Lance Hunt – HOFFE SIG Chairs

Well, daylight savings is about to end. Its darker in the mornings and the temperatures dropping, still the positive is that it was a better summer than the one we had last year!

For our group, the biggest thing happening at present is the release of the new service tags. You may recall that the money that will be raised from the sale of these service tags is going to be used to help fund the ongoing revisions of our HOFFE foundation document NZS 4503, the standard for Hand Operated Fire-Fighting Equipment. These 2024 dated service tags are still yellow with the same markings on the front as prescribed in section 2 of NZS 4503:2005 – the difference is these are readily identifiable by the FPA logo which is printed on the back of the service tag evidencing the support for the collection of an industry levy that will be contributed to the fire protection charitable trust.

To purchase these and to show your support the revision of our core standards document, simply contact a FPA member company who is a fire equipment wholesaler of HOFFE products.

Our next HOFFE group meeting is on the 17th of April.

Regards,

Steve Smith & Lance Hunt, HOFFE SIG Chair 2023/2024

Passive Fire Protection SIG Update

Author Ben Bakker – Passive Fire Protection SIG Chair

A Personal Take on the Impactful FPANZ Seminar

Recently, Justin, Loren, and I had the privilege of presenting at the FPANZ Passive Fire "Get it Right" seminar. This event turned out to be more than just a professional engagement; it became a profound learning and sharing experience that deeply impacted us all.

Our presentation aimed to demystify passive fire protection, blending technical insights with practical applications. What stood out was the interactive element of our session. Engaging with attendees, addressing their queries, and diving into real-life scenarios together, we not only shared our knowledge but also learned from the diverse experiences of the participants.

The opportunity to network and connect with fellow professionals was another highlight. Conversations extended beyond the seminar rooms, sparking ideas for collaboration and innovation in fire safety. These connections have since evolved, enriching our professional journeys and reinforcing the importance of community in our field.

Reflecting on the seminar, the message of getting passive fire protection "right" resonated deeply. It underscored our shared responsibility towards safety and excellence. This experience has not only strengthened our commitment to the cause but also inspired us to continue advocating for higher standards within the industry.

In essence, the FPANZ seminar was a pivotal moment for us, blending education, collaboration, and inspiration. It's an experience we'll carry forward in our work and collaborations, driven by the shared goal of enhancing fire safety for all.

Kind Regards, **Ben Bakker**Passive Fire Protection SIG Chair 2023/2024

Passive Fire Training & Technical

▶ Author Loren Olsen - Training & Technical Manager

The importance of CPD (Continued Professional Development) in our Industry

Continuing Professional Development is a common tool used across most professions and trades as a means of continually educating and upskilling industry professionals and workers. It refers to the process of undergoing regular training and tracking and documenting the skills, knowledge, and experience that your staff gain both formally and informally as you work, this is beyond any initial training or industry qualifications achieved. It's a record of what your staff experience, learn and then apply to your daily tasks.

CPD ensures we stay current with industry trends, innovation, business operations, and critical industry issues in a rapidly changing world.

CPD isn't just required in our industry, nor limited to the wider Construction Industry. It is a requirement across many other professions such as Medical, Dentistry, Legal and Veterinary to name a few.

Provided below are a couple of examples of CPD requirements for professions within the Construction Industry:

Engineering NZ

As part of the Engineering New Zealand membership, 40 hours of CPD per year is required.

Engineering NZ recommend a mix of learning:

- · Formal courses and online modules
- · Conferences and networking events
- Volunteering
- Reading
- · On-the-job training

New Zealand Institute of Quantity Surveyors - NZIQS

All NZIQS members including Associate, Fellow and Life Members are required to complete 15 hours of CPD is required per year. At least 10 of the 15 hours required must be Formal CPD activities. Examples listed below are only a few of actual list provided on the NZIQS website.

Formal CPD are activities that have structured learning objectives and outcomes, for example:

- NZIQS or other industry bodies' organised CPD events (webinars or online events, conferences, branch events, site visits)
- Computer training, e.g. excel, Project Management, iTWOCostX, BIM courses
- Short courses, e.g. Engineer to the Contract, NZS3910, Procurement, Cost Planning
- · Certification courses, e.g. Site Safe passport, Health & safety

Informal CPD is any self-managed learning that is relevant to your role, for example:

- Industry related reading, e.g. newsletters or online material
- · Research for a new specialised job, e.g. CLT, 3D printing

FPANZ currently provides two Certifications, FPANZ Certified Fire Alarm Contractor and FPANZ Certified Evacuation Consultant. Soon to be added is the Certified Passive Fire Contractor.

Passive Fire Training & Technical cont.

It's important for any FPANZ Certification that your staff keep their continued professional development up to date. Staff can attend any CPD events run by FPANZ or other organisations or companies and put it in a staff record of learning/CPD Logbook. CPD is not getting a qualification and 10 years later referencing that qualification every year without any further training. By virtue of the name, Continued Professional Development means what has been done in the past year or two to maintain and grow industry/ professional knowledge.

The following are examples of activities that staff should attend/complete and they must be relevant to the types of certification held by a company or individual, for example:

- Industry related reading, e.g. newsletters or online research material
- Attending conferences and trade shows
- Attending seminars, lectures and product launches
- Product specific training
- Watching webinars
- Attending presentations and tutorials
- Lecturing or teaching providing knowledge within the industry
- Onsite Toolbox Meetings
- In-house training at your place of work
- Publishing professional articles or research
- · Certification courses, e.g. Site Safe passport, Health & Safety, First Aid Courses
- Other related construction or subtrade training

We are committed to providing more technical and training webinars/seminars throughout the year and attendees of any FPANZ events will be provided a CPD Certificate with the recognised amount of CPD hours on it. This should be used as an entry in your staff record of learning/CPD Logbook. The requirements by councils, and other organisations to provide proof of CPD will only increase in the coming years and we actively encourage our members to formalise these processes.

Where we are requested to provide proof for CPD on behalf of members we will only do so if the evidence is recorded and has been provided, or where members have attended FPANZ events and signed in to prove they were in attendance.

If any members have questions on CPD requirements, you're welcome to contact us at info@fpanz.org

Kind Regards, *Loren Olsen* Training & Technical Manager, FPANZ

Sprinkler Systems Certifiers – Q1 Update

Source: Aon New Zealand – www.aon.co.nz

Our quarterly Sprinkler System Certifiers updates provide recent industry developments and solutions to common industry challenges faced firsthand – to ensure you are better informed and better advised to make better decisions.

Fire Brigade Attendance Points

The Issue: We recently received feedback from Fire and Emergency New Zealand (FENZ), where attendance points had not been approved prior to installation.

They provided this photograph, noting

that the two doors clashed, and would not open the required 165 degrees, and that the yellow handwheel did not provide the clearance mandated in NZS4541. Their complaints are legitimate and will need to be addressed before they retrospectively approve the attendance location.

It needs to be noted that NZS4541:2020 provisions for the protection of fire fighters from falling objects is more onerous that that required by NZS4541:2013. This will need to be considered by the design team, preferably before the fire contractor is involved.

Key Takeaway: Approval of attendance points must occur before installation to prevent potential issues that may require addressing before the approval of the attendance point.

Safety in Design

The Issue: Subsidiary isolation valves, including those for kitchen suppression systems have been installed in locations that may be problematic.

Key Takeaway: NZS4541 requires subsidiary valves to be located in an accessible area, without the need for step ladders and the like. They need to be readily assessable from floor level or other safe working environments.

This is even more important with kitchen suppression systems, where there are increased risks in installing relatively heavy agent cylinders using a ladder.

Extra High Hazard Design Tables

The Issue: NZS4541's extra high hazard storage design criteria are largely based on FM Global Data Sheet 8-9. When time and space allow, FM Global are carrying out a series of tests within their Rhode Island Research Campus, to validate the design criteria, in addition to establishing design criteria for new technology.

The design tables in the latest edition of FM DS 8-9 differ from the design criteria published in NZS4541:2020. In some cases, the latest edition of FM DS requires design criteria that is more onerous than that published in NZS4541:2020 and in other cases a less onerous design criteria.

Key Takeaway: If using these new design tables, designers need to be cognisant of some of the new requirements in the FM Data Sheets. For example, this could include the need to maintain 150mm flue spaces, as against the minimum 75mm allowed under NZS4541. If you are taking advantage of the newer design criteria, the requirements of the complete document that the design is based on, needs to be applied in its entirety.

Designers should consider using the most recent data, to ensure that fire systems are as reliable as is possible.

ate

Sprinkler System Certifiers - Q1 Update cont.

Institutional Heads

Institutional sprinkler heads are simply a standard sprinkler with additional features designed to make them difficult to attach a ligature device too.

The Issue: It is essential to consider how they are installed. They need to be pulled hard up against a solid ceiling. To this effect, they need to be fitted with a locking ring to ensure that they cannot be pulled below the ceiling.

If used in buildings such as forensic psychological wards, the decision as to ceiling materials need to be considered. For example, if beneath a plasterboard ceiling, consideration needs to be given to the possibility of digging out the plaster to allow a shoelace or similar device being lodged above the sprinkler escutcheon.

Key Takeaway: Alternatives to ensure that the installation is fit for purpose may be possible and should be reviewed with all parties, including Aon as the Sprinkler System Certifier prior to proceeding.

Diesel Fuel Bug

The Issue: We were recently notified of diesel bug being discovered in both the fire and emergency generator fuel tanks at a significant facility.

Diesel bugs can be bacterial, fungal or yeasts and can block fuel filters, starving the engine of fuel.

Diesel bugs form when water and bio-contaminants are present. Keeping tanks full will minimise condensation, and reduce the probability of bugs forming.

Key Takeaway: It is recommended as a minimum, that the maintenance regime for diesel pumps include taking regular samples of fuel and carrying out a visual inspection, to ensure that the fuel appears to be clean and in good condition. A more rigorous inspection and testing program may be warranted, which could include the use of diesel bug test kits. More information can be found **protecting your diesel (Diesel Bug) (z.co.nz)**

Storage Declaration Forms

For many projects, one of the most important documents that needs to be submitted with the design parameter submission is the Storage Declaration Form.

In storage and manufacturing occupancies, this form is essential to ensure that both the designer and the certifier understand the risks and can ensure that the sprinkler system is fit for purpose.

The Issue: In many cases, to allow the form to be properly filled out will require an understanding of the sprinkler standard, given the complexity of the material categorisation system. For example,

- Is the client expecting to store idle pallets inside the sprinklered space?
- **)** How are the goods packaged?
- Any special commodities requiring consideration in the design.

Key Takeaway: We recommend that the design team (be it the consulting fire protection engineer, or the contractor's designer) communicate clearly with the end user, to ensure that the form is correctly filled out. We have a small number of projects where the system has not been certified, as the sprinkler design did not cater for the tenant's storage requirements. We have also seen projects where the system had to be altered after completion to allow hygienic storage of idle pallets not allowed for in the original design.

It is important to note that storage is not a time bound activity. In some cases, the building user is assuming that they are not storing because the materials are in process or only being held for a short period of time. Both cases are storage in the context of NZS441.

For simple projects, where significant levels of storage outside small storage rooms is not present, we have prepared a simplified storage declaration – Aon Form 12. This form is designed to be used in occupancies such as extra light hazard through to ordinary hazard group 2.

What to learn more? Say hello to our Aon Fire Protection team today for guidance and advice to minimise fire risk, Call 0800 AON FIRE.

Kia ora

The next set of Determinations 2024/001 – 2024/010 are available on the Building Performance website.

The latest upload includes the following determinations that may be of wider interest:

<u>2024/001</u> considers the issue of a dangerous and affected building notice for a residential dwelling.

2024/001 considers the issue of a notice to fix for building work on an existing building's foundation.

2024/003 considers whether three buildings are backcountry huts.

<u>2024/004</u> considers the refusal to carry out a final inspection and issue a code compliance certificate for a 22-year-old house.

<u>2024/005</u> considers the authority's decision to issue a code compliance certificate for a swimming pool.

<u>2024/006</u> considers the refusal to issue a certificate of acceptance for building work associated with a dwelling.

<u>2024/007</u> considers an authority's refusal to grant building consent for a new dwelling, and compliance of a proposed foundation design with Clause B1 Structure.

<u>2024/008</u> considers whether a timber barrier to a retaining wall complies with Building Code clauses F4.3.1 and F4.3.4.

<u>2024/009</u> considers the issue of a code compliance certificate for a detached dwelling and outbuilding.

<u>2024/010</u> considers the decision to issue a notice to fix for sitework required to avoid the likelihood of damage to other property.

Level 5 Fire Protection Qualification Survey

Hanga-Aro-Rau Workforce Development Council is looking, with initial industry support, at the potential development of a **Level 5 Fire Compliance Qualification product.**

To obtain this, it is proposed that a learner will have a **Level 4 Fire Protection Qualification (or equivalent)**; and/or **have a set standard number of hours of learning completed** (which is still to be decided).

Please provide feedback on the proposed product by 5 pm on Wednesday 10 April, 2024:

Click this link to provide feedback: https://ncv.microsoft.com/N5S2t1TJp2

FIRE DETECTION AND ALARM SYSTEMS IN BUILDINGS NZS 4512:2021 Get it Right Seminar

FIRE DETECTION AND ALARM SYSTEMS IN BUILDINGS NZS 4512:2021 SEMINAR

This seminar series is driven by the ongoing changes we face as an industry and the importance of selecting the right products and installing and maintaining them correctly to meet performance, design, and standards requirements.

FPANZ is hosting a series of three-quarter day workshops throughout the country to continue its plan of education and information to ensure that the industry is continuing to get the latest information and support.

This seminar is a refresher/repeat of the seminars presented in 2021 when the new Standard was released. Please note that NZS 4512:2021 also now cited by MBIE in the Acceptable Solutions.

NZS 4512:2021 is a substantial revision of the 2010 edition. While the basics remain, technology and practice have marched on. Previous requirements have changed and substantial new provisions have been added. To ensure ongoing competence, it is critical for all industry participants to get up to speed with the changes.

Key changes which will be covered include:

- Wireless Detection Technologies new
- Visual Alerting Devices (VADs) new
- Networked systems new
- Power Supplies enhanced requirements
- Changes to Zones, Sectors, and MCP locations
- New Commissioning, Inspection, and Certification procedures & forms
- **)** Expanded Documentation and Reporting requirements
- Changes to Monthly and Annual Testing
- Updated Isolation procedures and forms
- Seismic resistance requirements
- Additional 'Type 5' system requirements
- New requirements for Labelling and Marking
- New Installation and Cabling requirements
- New requirements for Detector installation
- New equipment functionality and testing requirements

...And a myriad of other small, but significant changes you need to be aware of...

FPANZ is fortunate to have secured key members of the P4512 revision committee to present these seminars, so they come with in-depth familiarity with all the changes.

Time will be allocated to Q&A, so please review the document (available as a free download) beforehand and bring your questions.

PRESENTED BY: David Prosser and Jason Godsmark

CHRISTCHURCH: 2 APRIL 2024 COMMODORE HOTEL • 8.00am – 2.45pm

DUNEDIN: 3 APRIL 2024KINGSGATE HOTEL • 8.00am – 2.45pm

WELLINGTON: 4 APRIL 2024 SKY STADIUM • 8.00am – 2.45pm

RNZ YACHT SQUADRON • 8.00am – 2.45pm

TAURANGA: 10 JULY 2024 MERCURY BAYPARK STADIUM • 8.00am – 2.45pm

WHO SHOULD ATTEND

The seminars are particularly aimed at those involved in design, manufacture, supply, specification, consenting,installation, inspection, maintenance, and testing of Fire Alarm Systems.

Those who should attend include:

Fire Alarm system engineers, designers, and estimators

Fire Alarm system installation supervisors and charge-hands

Fire Alarm system installers and maintenance technicians

Fire Alarm Installation inspectors

Fire Alarm system surveyors and IQPs

Fire Alarm system component manufacturers and suppliers

Consent and compliance officers

Fire safety officers

INVESTMENT:

- MEMBERS (single) \$300 each* +GST
- MEMBERS (multiple) \$250 each* +GST
- NON-MEMBERS \$400 each +GST

*Available to FPANZ Financial Members who are fully paid-up.

Catering is provided for this full day seminar consisting of morning tea & lunch.

No Elev8 fees for non-Fees Free eligible learners

(Note: does not apply to non-domestic learners)

Intended programmes:

Fire – Elev8 fee.

Period of Fees Free offer:

 1 October 2023 – 30 September 2024 (inclusive).

What is provided free:

· Elev8 annual fee (only).

What is not included:

CANVAS online learning fees

Eligible enrolments:

Start date must be between
 1 October 2023 – 1 December 2023.

General information:

- Eligible Elev8 learners returning a 'Maybe' or a 'No' for Fees Free will be credited the Elev8 fee covering the agreed period.
- Fees Free eligibility returning a 'Maybe' will still require a statutory declaration to be completed.

If you would like any further information, please contact your training advisor.

Use of FPANZ Logo

Recently we have noticed that some of our FPANZ members (and even non-members) have been incorrectly using our FPA trademarked corporate logo.

This logo is not to be used by any entity without the written permission of the Chief Executive Officer and/or FPANZ Board. The purpose of this logo is to provide a corporate identity for the Association in its general course of business activities.

The FPANZ membership tier status logos shown below are licensed to be used by any financial member of FPANZ who has signed up to the FPANZ Code of Ethical Conduct and is fully compliant with all its requirements.

For a list of logo guidelines please visit our website https://www.fpanz.org/about/logo-guidelines

If you are using an incorrect logo and would like to request a membership logo for use, please email **info@fpanz.org**

If you are not an FPANZ member and have not gained written permission to use the FPA logo, then we ask that you remove it from your website, email signature or anywhere else that it is currently being used.
