

## WELCOME

*Welcome to September's newsletter.*

This month's update is relatively short as we are well under way for FireNZ and this is taking up most of our time. It might also take us a little bit longer than normal to respond to requests as we are prioritising our activities. However, we are available, and if anything urgent crops up, please do give us a call. That aside, we still have several topics to discuss in this update.

Scott Lawson

### FireNZ

As you read this, we are just some 20 days out from the start of this year's event. Tickets are selling out fast, so if you were still thinking about coming along, then act quickly as spaces are limited. We have a great line-up of speakers again and an excellent turnout of suppliers. Remember, the trade show is always free for staff to attend, and this year suppliers are also running product showcase events over the three days. Those of you with staff in the lower North Island should encourage your teams to take the time to attend and see all the leading suppliers in one place.

Other details and up-to-date information are on our website ([www.firenz.org](http://www.firenz.org)) under the drop-down tabs at the top right of the screen.

We look forward to seeing you all there on the 23rd of October.

### 'Get it Right' seminars

We are working on the next release of our seminars, which will cover the fire alarm and sprinkler disciplines before the end of December. We are seeking topics in the sprinkler space, so if you have any areas that you would like covered, please reach out to us on [info@fpanz.org](mailto:info@fpanz.org). We will also be announcing dates and locations for some of these new seminars in upcoming newsletters, so keep an eye out.

### Subject matter experts

A big thank you to those people who came forward to help review some of the training content we are working on. We will be in touch about what we need as development ►

starts to close out. As with all these things, having a good base of different experts helps us make sure the content is fit for purpose.

### Audit

As mentioned last month, we have had our annual audit going on, and this has now been completed. Once again, we have received a clean bill of health. The audited accounts will be distributed in the AGM report in November. Further details on the AGM will come out next month.

### New members

I would like to welcome the following two new provisional members this month:

- › Lumen Ltd
- › Passive Fire Professionals Ltd

Until next month,

**Scott Lawson**

# HOFFE SIG Update

» Authors **Steve Smith & Lance Hunt** – HOFFE SIG Chairs

I think there's something about this time of the year that makes people's attitudes more positive. I am sure that the warmer weather and beginning of daylight savings helps, that said the AB's securing the Bledisloe Cup for the 22nd successive time might also help, even if only a little???

We continue to hear of people who are confused about where Lithium-Ion type fires fit into our classification system. Some of the confusion seems to be around the fact that as Lithium is a combustible metal under the AS/NZS listings a Lithium fire is classified as a Class D fire, however a class D fire extinguisher is unlikely to have any real effect on a Lithium-Ion fire as this is not a combustible metal fire. That said, under the same current AS/NZS fire extinguisher class listings a category doesn't yet exist for fires involving Lithium-Ion, though developing a category within the AS/NZS framework is a current project.

As an added factor Lithium-Ion batteries do contain Lithium salts which are self-oxidising hence following a fire (500°C required for ignition) reignition is a common problem with these fires and starving them of oxygen is ineffective.

Many dangerous gases are released during a lithium-Ion fire including Carbon Monoxide and dioxide, Hydrogen Cyanide, Fluoride and Chloride, Sulphur Dioxide, methane and butane amongst other nasty gases. The reason we mention this is that these are potentially very dangerous fires to fight, yet we hear of companies overstating the effectiveness of their fire extinguishers while encouraging people to purchase, and use portable extinguishers in a potentially dangerous manner, encouraging people to get close to these fires in order to effectively use these products. This practice is inherently dangerous in most situations but is even worse if you are in a confined space such as a building, vehicle or vessel.

Some of the reasons for these types of Lithium-Ion fires continue to be;

- » Short circuiting
- » Overcharging
- » Charging too rapidly (often the incorrect charger)
- » Excessive heat
- » Excessive cold
- » Excessive moisture
- » Impacts including crushing & penetration
- » Manufacturing defects

As with most hazards, managing these by charging the batteries in an isolated location free from combustibles is commonly considered to be good practice.

Please continue to look for and document examples of bad practices and non-compliant products as these are still being sought by the FPA and the Commerce Commission.

Our next HOFFE Group meeting is on the 27th November.

Regards,  
**Steve Smith & Lance Hunt,**  
HOFFE SIG Chair 2024/2025

# Passive Fire Protection SIG Update

» Author **Ben Bakker** – Passive Fire Protection SIG Chair

## Beyond Fire Doors: What Full Passive Fire Compliance Entails

When it comes to fire safety in buildings, many managers and property owners assume that once fire-rated doors and walls are installed, their compliance box is ticked. However, achieving full passive fire protection is far more comprehensive and requires an ongoing commitment to safety measures throughout the life of the building.

Passive fire protection is not just about isolating flames—it’s about ensuring the entire structure is fortified against the rapid spread of fire, safeguarding both property and lives.

Let’s dive into what **true passive fire compliance** really entails and why it’s crucial to view it as a holistic process.

### 1. Proper Fireproofing of Penetrations

One of the most overlooked aspects of fire protection is the treatment of penetrations—where services like pipes, cables, or ducts pass through walls, ceilings, or floors. These penetrations can become weak points in a building’s fire resistance if not properly sealed with fire-resistant materials. Simply having fire-rated walls and ceilings isn’t enough if unprotected penetrations allow fire and smoke to travel from one compartment to another.

**Ensuring compliance** means that every penetration is sealed with tested and certified fire-stopping solutions that can withstand fire for the required duration, maintaining the integrity of the fire-rated compartments.

### 2. Adequate Compartmentalisation of the Building

Passive fire protection revolves around the principle of compartmentalization. This involves dividing the building into smaller fire-resistant sections, or “compartments,” which help contain fire to its point of origin. This is critical in delaying the spread of fire, giving occupants more time to evacuate and emergency services a better chance to control the situation.

**Full compliance** includes making sure that these compartments are designed and constructed correctly, with fire-rated barriers, walls, and floors in place. Additionally, compartmentation needs to account for areas like stairwells, lift shafts, and service risers, which can act as vertical channels for fire and smoke if not properly protected.

### 3. Fire-Resistive Materials for Structural Elements

The structure of a building plays a major role in passive fire protection. Columns, beams, and other load-bearing elements must be treated with fire-resistive materials to prevent collapse during a fire. Without proper protection, the integrity of the building can be compromised long before the flames are controlled, leading to significant destruction or worse—loss of life.

**Fire-resistive materials** like intumescent coatings, fireproof boards, and sprays must be applied to these structural elements to give the building enough time to resist fire for a specified period, helping prevent catastrophic structural failure.

### 4. Regular Maintenance and Inspections

Fire safety is not a one-time task; it’s a continuous responsibility. Buildings change over time, with new services being added, penetrations made, and materials wearing down. ►

## Passive Fire Protection SIG Update *cont.*

A major part of staying compliant involves regular maintenance and inspections to ensure that all passive fire measures remain intact and effective.

Building managers must ensure **routine inspections** of fire doors, barriers, firestopping measures, and other elements. These inspections not only check for physical wear and tear but also verify that any retrofitting or renovations have not compromised fire safety.

Kind Regards,

**Ben Bakker**

Passive Fire Protection SIG Chair 2024/2025

### Nail down savings with top Suppliers

# 2025 Health and Safety in Construction Scholarships

» Author: **Dianne Pulham, Sitesafe.org**

## Site Safe is offering scholarships for their Health and Safety in Construction Programme (HSCP).

This programme provides learners with essential health and safety training needed to make a difference at work. Completing the programme will result in an NZQA recognised New Zealand Certificate in Workplace Health and Safety Practice (Level 3).

There are six categories you can apply under:

- » Under 25 years of age (any ethnicity)
- » Open (any age or ethnicity)
- » Māori (any age)
- » Pasifika (any age)
- » Women working in construction (any age or ethnicity)
- » Accessibility (any age or ethnicity)

Learn more: <https://www.sitesafe.org.nz/training/scholarships/>

**Health and Safety**  
**in Construction Programme**  
 Scholarship applications now open

**HSCP** HEALTH & SAFETY  
 IN CONSTRUCTION

**SITESAFE**  
 Te Kaitiaki o Haumarū

The banner features a dark background with white and orange text. On the right side, there are several isometric illustrations of construction vehicles and workers, including a concrete mixer truck, a flatbed truck, a van, a forklift, and several workers in hard hats and safety gear.

# BUILDING PERFORMANCE

## Building Consent Authorities Institutional Reform Programme

Tēnā koe

The Government announced today that it has agreed to investigate significant reform of the building consent system in Aotearoa New Zealand. The aim is to drive consistency, certainty and efficiency, making it clearer and easier for Kiwis to build.

MBIE will now progress work to identify the best way to deliver consenting services in Aotearoa New Zealand. Some initial ideas we will be investigating include developing a new Building Consent Authority (BCA) structure, liability settings and the role of private insurance in the consent system.

We are at the very beginning of what will be a long-term, strategic and thorough work programme. With changes this significant, it is important we take our time and get it right.

We are starting off by talking with those who work within the building system about the potential options to improve the building consent system and listening to any new innovative ideas they have. This is an opportunity to collaborate and re-imagine a core part of our building system to make sure it works for us now and into the future.

We will use the information from our discussions to prepare further advice for the Building and Construction Minister with the aim of conducting a public consultation on options for change in the first half of 2025.

Ngā mihi nui

# Fire apprenticeship Elev8 enrolment fee waived

Learners who are ineligible for Fees Free, may now be eligible to have their Elev8 enrolment fee waived for the first 12 months.

## Intended programmes:

- Fire.

## What is provided free:

- Elev8 annual fee only.

## What is not included:

- Canvas online learning fees.

## Eligible enrolments:

- Enrolment date must be before Monday 2 December 2024.

## Period of free Elev8 offer:

- 12 months from start date.

## General information:

- Eligible Elev8 learners returning a 'maybe' or 'no' for Fees Free will be credited for the Elev8 fee covering the agreed period
- Fees Free eligibility returning a 'maybe' will require a completion of a statutory declaration.

For further information, please [contact us](#).

# Use of FPANZ Logo

**Recently we have noticed that some of our FPANZ members (and even non-members) have been incorrectly using our FPA trademarked corporate logo.**

This logo is not to be used by any entity without the written permission of the Chief Executive Officer and/or FPANZ Board. The purpose of this logo is to provide a corporate identity for the Association in its general course of business activities.

The FPANZ membership tier status logos shown below are licensed to be used by any financial member of FPANZ who has signed up to the FPANZ Code of Ethical Conduct and is fully compliant with all its requirements.

For a list of logo guidelines please visit our website <https://www.fpanz.org/about/logo-guidelines>

If you are using an incorrect logo and would like to request a membership logo for use, please email [info@fpanz.org](mailto:info@fpanz.org)

**If you are not an FPANZ member and have not gained written permission to use the FPA logo, then we ask that you remove it from your website, email signature or anywhere else that it is currently being used.**
